Courses of Study

(Detailed Course Contents)

Under-graduate, Post-graduate & Integrated Programmes (2024 Batch)

Shri Mata Vaishno Devi University

Kakryal, Katra 182320 Jammu & Kashmir

VISION

Establishment of a Scientific & Technical University of Excellence to nurture young and talented human resources for the service of Indian Society & world at large and preserving the integrity and sanctity of human values.

MISSION

The mission of the University is the pursuit of Education, Scholarship and Research at the highest International level of excellence.

OBJECTIVES

- Provide education and training of excellent quality, both at undergraduate and postgraduate level.
- Ensure that the University achieves and maintains an international standing in both teaching and research
- Promote study and research in new and emerging areas and encourage academic interaction of the faculty and the students at national and international levels.
- Encourage close collaboration with industry and facilitate the application of research for commercial use and for the benefit of society.

Programme of Study

&

Syllabus of Courses

Offered by

School of Computer Science& Engineering

Course Structure of B. Tech (Computer Science & Engineering) programme [Entry Batch 2024]

Semester I

| Course Type | Course Code | Course Title | L | Т | P/S | Credits |
|----------------|-------------|---|---|---|-----|---------|
| BSC 1 | MTL BS101 | Engineering Mathematics-I | 3 | 1 | 0 | 4 |
| BSC 2 | PHL BS101 | Engineering Physics | 3 | 0 | 0 | 3 |
| BSC 2 | PHP BS101 | Engineering Physics Lab | 0 | 0 | 2 | 1 |
| ESC 1 | CSL ES101 | Introduction to C Programming | 3 | 0 | 0 | 3 |
| ESC 1 | CSP ES101 | C Programming Lab | 0 | 0 | 2 | 1 |
| ESC 2 | ECL ES103 | Digital Electronics | 3 | 0 | 0 | 3 |
| ESC 2 | ECP ES103 | Digital Electronics Lab | 0 | 0 | 2 | 1 |
| SEC 1 | MEM SE103 | Engineering Graphics with CAD | 1 | 0 | 2 | 2 |
| AEC 1 / | VAC 1 | Ability Enhancement /Value Added Course | | | | 2 |
| | | Total Credits | | | | 20 |

Semester II

| Course Type | Course Code | Course Title | L | Т | P/S | Credits |
|----------------|-------------|-----------------------------|---|---|-----|---------|
| BSC 3 | MTL BS102 | Engineering Mathematics-II | 3 | 1 | 0 | 4 |
| BSC 4 | MTL BS106 | Discrete Structures | 3 | 1 | 0 | 4 |
| DCC 1 | CSL DC102 | Programming using Python | 3 | 0 | 0 | 3 |
| DCC 1 | CSP DC102 | Python Programming Lab | 0 | 0 | 2 | 1 |
| DCC 2 | CSL DC104 | Data structure | 3 | 0 | 0 | 3 |
| DCC 2 | CSP DC104 | Data Structure Lab | 0 | 0 | 2 | 1 |
| SEC 2 | MEM SE102 | Engineering Workshop | 1 | 0 | 2 | 2 |
| AEC 2 | | Ability Enhancement Course | | | | 2 |
| VAC 2 | | Value Added Course | | | | 2 |
| MAC 1 | PCN MA102 | Universal Human Values - II | 2 | 0 | 0 | 0 |
| | | Total Credits | | | | 22 |

Exit option: Students who opt to exit after completion of the year and have secured 42 credits (As per the program structure) shall be awarded the UG Certificate if, in addition, they earn additional 6 credits through 2 months of summer internship/ ITI level course/skill-based course during the summer vacation of the first year.

Semester III

| Course Type | Course Code | Course Title | L | т | P/S | Credits |
|----------------|-------------|---------------------------------------|---|---|-----|---------|
| BSC 5 | BTL BS201 | Introduction to Biology for Engineers | 3 | 0 | 0 | 3 |
| ESC 3 | ECL ES205 | Microprocessors & Interfacing | 3 | 0 | 0 | 3 |
| ESC 3 | ECP ES205 | Microprocessors & Interfacing Lab | 0 | 0 | 2 | 1 |
| DCC 3 | CSL DC201 | Theory of Computation | 3 | 1 | 0 | 4 |
| DCC 4 | CSL DC203 | Operating Systems | 3 | 0 | 0 | 3 |
| DCC 4 | CSP DC203 | Operating Systems Lab | 0 | 0 | 2 | 1 |
| DCC 5 | CSL DC205 | Data Science & Analytics | 3 | 0 | 0 | 3 |
| DCC 5 | CSP DC205 | Data Science & Analytics Lab | 0 | 0 | 2 | 1 |
| SEC 3 | | Skill Enhancement Course - 3 | | | | 2 |
| PR | CSI PR201 | Summer Internship-I | | | | 1 |
| VAC 3 | | Value Added Course | | | | 2 |
| | | Total Credits | | | | 24 |

Semester IV

| Course Type | Course Code | Course Title | L | т | P/S | Credits |
|----------------|-------------|--------------------------------------|---|---|-----|---------|
| DCC 6 | CSL DC202 | Soft Computing | 3 | 0 | 0 | 3 |
| DCC 6 | CSP DC202 | Soft Computing Lab | 0 | 0 | 2 | 1 |
| DCC 7 | CSL DC204 | Design & Algorithm Analysis | 3 | 0 | 0 | 3 |
| DCC 7 | CSP DC204 | Design & Algorithm Analysis Lab | 0 | 0 | 2 | 1 |
| DCC 8 | CSL DC206 | Database Management Systems | 3 | 0 | 0 | 3 |
| DCC 8 | CSP DC206 | Database Management Systems Lab | 0 | 0 | 2 | 1 |
| DCC 9 | CSL DC208 | Computer Organization & Architecture | 3 | 1 | 0 | 4 |
| DCC 10 | CSL DC210 | Compiler Design | 3 | 1 | 0 | 4 |
| VAC 4 | BTL VA202 | Environmental Science & Education | 2 | 0 | 0 | 2 |
| | | Total Credits | | | | 22 |

Exit option: Students who opt to exit after completion of the second year and have secured 88 credits (As per the program structure) shall be awarded the UG Diploma if, in addition, they earn an additional 6 credits through 2 months of summer internship/ Diploma level courses/skill vacation of the second year.

Semester V

| Course Type | Course Code | Course Title | L | т | P/S | Credits |
|-----------------|-------------|--|---|-----|-----|---------|
| DCC 11 | CSL DC301 | Computer Networks & Communication | 3 | 0 | 0 | 3 |
| DCC 11 | CSP DC301 | Computer Networks & Communication Lab | 0 | 0 | 2 | 1 |
| DCC 12 | CSL DC303 | Object Oriented Programming using JAVA | 3 | 0 | 0 | 3 |
| DCC 12 | CSP DC303 | Object Oriented Programming Lab using JAVA | 0 | 0 | 2 | 1 |
| DCC 13 | CSL DC305 | Machine Learning | 3 | 0 | 0 | 3 |
| DCC 13 | CSP DC305 | Machine Learning Lab | 0 | 0 | 2 | 1 |
| DEC 01 | | School Elective – I | 3 | 1/0 | 0/2 | 4 |
| DEC 2 /GEC 1 | | School Elective – II/Generic Elective - I | 3 | 1/0 | 0/2 | 4 |
| PR | CSI PR301 | Summer Internship-II | | | | 1 |
| DCC | CSD PR301 | Project Work - I | | | | 2 |
| | | Total Credits | | | | 23 |

Semester VI

| Course Type | Course Code | Course Title | L | т | P/S | Credits |
|-----------------|--------------------------|---|---|-----|-----|---------|
| DCC 14 | CSL DC302 | Deep Learning | 3 | 0 | 0 | 3 |
| DCC 14 | CSP DC302 | Deep Learning Lab | 0 | 0 | 2 | 1 |
| DCC 15 | CSL DC304 | Software Engineering | 3 | 0 | 0 | 3 |
| DCC 15 | CSP DC304 | Software Engineering Lab | 0 | 0 | 2 | 1 |
| DEC 3 | CSX DEXXX | School Elective - III | 3 | 1/0 | 0/2 | 4 |
| DEC 4 /GEC 2 | CSX DEXXX / CSX GEXXX | School Elective - IV/Generic Elective -II | 3 | 1/0 | 0/2 | 4 |
| AEC | | Management / Entrepreneurship/Economy | 3 | 0 | 0 | 3 |
| DCC | CSD PR302 | Project Work - II | | | | 2 |
| MAC 2 | PCN MA302 | Indian Knowledge System | 2 | 0 | 0 | NC |
| | | Total Credits | | | | 21 |

Exit option: Students who opt to exit after completion of the third year and have secured 132 credits (As per the program structure) shall be awarded B.VOC Degree in the Major discipline if, in addition, they have completed the summer internship of additional 4 credits during summer vacation of the third year.

Semester VII

| Course Type | Course Code | Course Title | L | т | P/S | Credits |
|------------------|--------------------------|--|---|-----|-----|---------|
| DCC 16 | CSL DC401 | Digital Image Processing | 3 | 0 | 0 | 3 |
| DCC 16 | CSP DC401 | Digital Image Processing Lab | 0 | 0 | 2 | 1 |
| DEC 5 | CSX DEXXX | School Elective – V | 3 | 1/0 | 0/2 | 4 |
| DEC 6 / GEC 3 | CSX DEXXX / CSX GEXXX | School Elective – VI/ Generic Elective – III | 3 | 1/0 | 0/2 | 4 |
| PR | CSI PR401 | Summer Internship - III | | | | 2 |
| DCC/PR | CSD PR401 | Project Work- III | | | | 4 |
| | | Total Credits | | | | 18 |

Internship to be completed in summer vacation after sixth semester.

Semester VIII

| DCC/PR | CSD PR402/ CSI PR402 | Major Project /Internship (Industrial or In-house Project) | | | 10 |
|--------|-------------------------|--|-----|--|----|
| | | Total Credits | 160 | | 10 |

B. Tech. (Honor's) Program: The four-year B. Tech. (Honor's) degree in the Major discipline will be awarded to those who have completed the credit requirement of a four-year B.Tech. degree program and earned 12 Additional Credits through DEC's provided a minimum of seven DEC's earned are from the basket of a particular specialization/domain.

These elective courses can be registered during V to VIII semester subject to a maximum limit of course registration up to 32 credits, including core and other courses.

Department Elective Course – 7 4 DEC
Department Elective Course – 8 4 DEC
Department Elective Course – 9 4 DEC

These elective courses can be registered during V to VIII semester subject to a maximum limit of course registration up to 32 credits, including core and other courses. On exit, student shall be awarded B.Tech.(Honor's) in Major discipline with specialization in the specific domain.

2. B. Tech. Program with Minor/Interdisciplinary Area Specialization:

The four-year B. Tech. degree in the Major discipline with Minor in a specific domain will be awarded to those who have completed the credit requirement of four-year B. Tech degree program and earned 12 Additional Credits through GECs provided all credits earned through GECs are from the basket of a particular Minor.

Generic Elective Course – 5 4 GEC

Generic Elective Course – 6 4 GEC

Generic Elective Course – 7 4 GEC

The set of courses required to be taken, by students of other School, to obtain Minor/Interdisciplinary Area Specialization will be clearly defined by each School for the benefit of the students. The four-year B. Tech. degree with Minor in a specific domain will be awarded to those who complete a four-year degree program with 172 credits and have satisfied the credit requirement. A student, who wishes to pursue B. Tech. with Minor, shall earn 12 additional credits from General Elective course provided all 7 GECs (GEC1 to GEC7) are earned from the basket of courses prescribed for that particular Minor.

Course Code : MTL BS101

Course Title : Engineering Mathematics-I

L-T-P/S=Credits : 3-1-0 =4

Course Category : Basic Science Course

Pre-requisite Courses (if any) : Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

UNIT-I

Differential Calculus: Partial Differentiation, asymptotes, concavity, convexity, point of inflexion, curvature, radius of curvature, curve tracing, envelopes and evolutes, change of variables, Jacobian, expansion of functions of several variables, chain rule, mean value theorem, Taylor series with remainder term, maxima & minima, saddle point.

UNIT-II

Integral Calculus: Fundamental theorem of Integral calculus, reduction formulae, properties of definite integral, applications to length, area, volume, surface of revolution. Moments, centre of gravity, improper integrals, β - γ functions

UNIT-III

Matrices: Elementary row and column transformation, linear dependence, rank of a matrix, consistency of system of linear equations, solution of linear system of equations, characteristic equations, Cayley Hamilton theorem, eigen values and eigen vectors, diagonalization, complex matrices.

Suggested Books:

| Jugg | Suggested books. | | |

| Refe | Reference Books | | |
| 1 | Shanti Narayan, Differential Calculus, S. Chand; 30 th Revised edition | 2005 | |
| 2 | | | |

Course Outcome

| Sr | Course Outcome | СО |
|----|--|-----|
| 1 | Introduce the basic concept of differential calculus to understand the different subjects of | CO1 |
| 1 | engineering as well as basic sciences. | |
| 2 | Enable the students to develop the concept of partial differentiation to understand their | CO2 |
| | applications in engineering | |

| 2 | Understand the fundamentals of Integral calculus to understand their applications to | CO3 | |
|---|---|-----|--|
| ٦ | length, area, volume, surface of revolution, moments and centre of gravity | | |
| 4 | 4 Understand the improper integrals and Beta and Gamma functions and their applications C | | |
| 5 | Understand the idea of Linear Algebra which are useful to all branches of engineering | CO5 | |

Course Code : PHL BS101

Course Title : Engineering Physics

L-T-P/S=Credits : 3-0-0 = 3

Course Category : Basic Science Course

Pre-requisite Courses (if any) : Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

UNIT I: Force and electric field due to continuous charge distribution, Field lines-Electric Flux, Gauss's Law (differential and integral forms), Applications of Gauss's law Electric potential, work done in assembling a charge distribution

UNIT II: Force Law - line current, surface current and volume current densities (Equation of continuity), Biotsavart law, Properties of B, Magnetic flux-Divergence B, Curl B, magnetic vector potential A Ampere's law (differential and integral forms), displacement current, modified Ampere's law Faraday's laws of electromagnetic induction, Four Maxwell's equations in differential and integral forms

UNIT III: Electromagnetic Spectrum, brief introduction to black body radiation, photo-electric Effect, Compton Effect, wave particle duality (de-Broglie waves), Davisson-Germer Experiment, concept of wave function and its physical significance, Phase and group velocities, Uncertainty principle.

UNIT IV: Bohr theory of atom (with finite and infinite nuclear mass) Derivarion of time dependent and time independent Schrödinger wave equations, Expectation values and operators (momentum, energy and angular momentum operators), Commutators, Particle in a box of infinite height (One dimensional)

UNIT V: Free electron theory-Free electron gas, Energy levels and density of states in one dimension Band theory of solids, Classification of metals, semiconductors and insulators on the basis of band theory

List of Experiments

| Sr | Contents |
|----|---|
| 1 | To study the Measuring Instruments (Vernier Calipers, Screw Gauge &Spherometer) |
| 2 | To find the angle of prism by rotating the telescope method. |
| 3 | To find the refractive index of the material of the given prism using a spectrometer |
| 4 | To determine the refractive index of the given liquid (water) using a hallow prism and spectrometer. |
| 5 | To study the Newton's Interference Rings and to determine the wavelength of Sodium light. |
| 6 | To determine the Wave Length of Sodium Light using a plane diffraction grating. |
| 7 | To determine the frequency of A.C. mains with a Sonometer using non magnetic wire. |
| 8 | To study the V-I characteristics of a Zener Diode. |
| 9 | To study the performance of a Half-wave, Full-wave & Bridge wave rectifier without filters |
| 10 | To verify Stefan's law by estimating the temperature of a torch bulb filament from resistance measurement. |
| 11 | To study the Hall Effect and to calculate the Hall Coefficient and Charge Carrier Concentration of a given sample |
| 12 | To study the dependence of Refractive Index(μ) of the material of the prism on the Wavelength(λ) of light; and hence(1) to determine the Dispersive Power of the material of prism;(2)to verify the Cauchy Relationship μ =a+b/ λ^2 ,and to estimate the values of a & b(3)to plot a graph of d μ /d λ versus λ . |
| 13 | To determine the band gap by measuring the resistance of a Thermistor at different temperatures |
| 14 | To determine the energy band gap of a semiconductor diode (Ge) using Four Probe Method. |
| 15 | To study the wavelength of He-Ne Laser |

Pre-requisite Courses (if any) :No Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

 $History\ of\ Programming\ Languages\ \ and\ their\ constructs\ ,\ approach\ ,\ Basics\ of\ computer\ systems\ ,\ programs,\ flowchart\ ,\ algorithms.$

Different Number systems , Algorithms and flow charts , types of algorithm , properties of good algorithm , examples , use of flow chart. C- fundamentals , constants, variables ,data types and ranges , Different , expressions operators Methods of writing C program

C- fundamentals , constants, variables ,data types and ranges , Different , expressions operators. Methods of writing C program. Input output statements , format conversions.

 ${\it Character\ operation,\ control\ statements\quad simple\ ,\ if-\ ,\ if\ else\ ,\ ternary\ ,\ compound\ ,\ nested\ .}$

Switch case statements, different programs on the topic Looping statements FOR, WHILE, Do- WHILE, Nested FOR, Parallel FOR, Goto, continue, break statement, programs on the topic.

Looping statements FOR , WHILE, Do- WHILE, Nested FOR, Parallel FOR.. Programs on the covered topics

Introduction to functions , different types of functions in C, Recursion , function as argument, Nesting of functions. Call by reference and call by value=s, Various programs with usage of different function in C

Arrays in C , Numeric array, single dimensional, multi dimensional arrays printing of arrayssupply of values to array , character array , matrix , input output formats for String

String operation , Types of operations , string functions , length of string , comparing of string

Auxiliary statements and operations , types of variables automatic static , global , register variables

User defined data types, Enumerated, Typedef Unions

Pointers in C ,Decalration of pointer , concept of pointer , types of pointers pointer as argument of function program.

Use of pointer in an array, character operation using pointer, function pointer Use of pointer in multi dimensional array,

Pointers as a main variable of structure , Structure of pointers . Structure of normal variables and pointers Nested structure programs on structure and pointers.

File operations , Creation of files , file organization Sequential, direct, indexed , Random access file organization, file pointers, file input output functions

Error in opening file end of file Fgets ,Exit, Fread , Fputs , Eof, Fprintf, StdinStdout, Stdeer file pointer

| S.No. | List of Programs |
|-------|---|
| 1. | Write a program to print "Hello World" on the screen |
| 2. | Write a program to find sum of the two numbers |
| 3. | Write a program to find average of two numbers |
| 4. | Write a program to know the number of bytes of data type contains |
| 5. | Write a program to display the ASCII code of a variable on the screen |
| 6. | Writ a program to determine the area of a circle |
| 7. | Write a program to find the area of a square |
| 8. | Write a program to find the sum of digits of a 4 digit number |
| 9. | Write a program to reverse a 4 digit number |

| 10. | Write a program to swap the values of two variables with/without using third variable |
|-----|--|
| 11. | Write a program to display if a number is even or odd |
| 12. | Write a program to display if a number is positive or negative |
| 13. | Write a program to display that a person is eligible for voting |
| 14. | Write a program to display greatest among two numbers |
| 15. | Write a program to display subject of 5 marks & compute percentage and display pass or fail |
| 16. | Write a program to read number between 1-7 & display corresponding day of week |
| | |
| 17. | Write a program to read marks of five subjects and compute percentage and display grade of students |
| | based on percentage |
| 18. | Write a program to check whether the year entered is leap year or not |
| 19. | Write a program to print the relation between 2 numbers as equal to, less than or greater than |
| 20. | Write a program to read lower case character and display it in upper case |
| 21. | Write a program to convert dollar into rupees |
| 22. | Write a program to convert Celsius into Fahrenheit |
| 23. | Write a program to swap the values to two variables with the help of temporary variable |
| 24. | Write a program to make a calculator |
| 25. | Write a program to make a calculator Write a program to print "Hello world" 10 times using while loop |
| | Write a program to print "Hello world" a times using while loop |
| 26. | Write a program to print "Hello world" n times using while loop |
| 27. | Write a program to print 1 to 10 on screen |
| 28. | Write a program to print 10 to 1 on screen |
| 29. | Write a program to print sum of all even numbers between 1 to 100 |
| 30. | Write a program to print sum of all odd numbers between 1 to n |
| 31. | Write a program to print multiplication table of n |
| 32. | Write a program to find factorial of a number |
| 33. | Write a program to find sum of all numbers between m to n |
| 34. | Write a program to read a number and print each digit on separate line |
| 35. | Write a program to find the sum of digits of a number |
| 36. | Write a program to reverse a number |
| 37. | Write a program to find if the number is Palindrome or not |
| 38. | Write a program to read +ve numbers from user till user enters 0 & display for each number whether it is |
| 36. | |
| 20 | even or odd |
| 39. | Write a program to find the reverse of a number |
| 40. | Write a program to read +ve number from user till user enters 0 and display count of even numbers and |
| | odd numbers. |
| 41. | Write a program to read character from user till user enters special character and display count of vowels |
| | and digits |
| 42. | Write a program to read a number from user and display whether it is prime or not |
| 43. | Write a program to print all leap years between year m to n |
| 44. | Write a program to read a number and find if it is an Armstrong number or not |
| 45. | Write a program to print all prime number between n to m |
| 46. | Write a program to print 1st n prime numbers. |
| 47. | Write a program using switch case to read one number and perform 1. Sum of digit 2. Reverse of number |
| | 3. Number is palindrome or not |
| 48. | Write a program using switch case to read operator and perform (+, -, /, *) operators of operands |
| 49. | Write a program using switch case to read a number and perform 1. Factorial of a number 2. Number is |
| | prime 3. Number is Armstrong 4. Even or odd |
| 50. | Write a program to sort an array of type integer |
| 51. | Write a program to reverse an array element in the array |
| | |
| 52. | Write a program to check if the array is palindrome or not |
| 53. | Write a program to reverse an array element in the array |
| 54. | Write a program to check of the array is palindrome or not |
| 55. | Write a program to insert an element in sorted array at its right place |
| 56. | Write a program to delete all the duplicate numbers from the array |
| 57. | Write a program to read temperature recorded for the month of September. Display the highest and |
| | lowest temperature recorded |
| 58. | Write a program to read total marks of 90 students. Find the average marks scored by the class. Display |
| | the number of students having marks below average and total number of students marks equal to or |
| | above average. |
| 59. | Write a program to read n numbers in an array. Display the count of total -ve numbers, +ve numbers and |
| | total zero. Your program must derive m which should be added to all -ve numbers so as they are |
| | converted to either zero or +ve number. |
| 60. | Write a program to sum the two arrays into another array. |
| | |
| 61. | Write a program to add two matrix using multi-dimensional arrays |
| 62. | Write a program to multiply to matrix using multi-dimensional arrays |
| 63. | Write a program to find transpose of a matrix |
| 64. | Write a program to print the characters of a string in vertical order |
| 65. | Write a program to find the length of a string |
| | |

| 66. Write a program to find the frequency of characters in string 67. Write a program to find the total number of vowels in the string 68. Write a program to find the number of vowels, consonants, digits and white space in string using Switch-case 69. Write a program to concatenate two strings 70. Write a program to find the total number of words in a sentence 71. Write a program to rewove all characters in a string except alphabet 73. Write a program to remove all characters in a string except alphabet 73. Write a program to remove all characters in a string 74. Write a program to search a character in a string 75. Write a program to search a character in a string 76. Write a program to delete a character in a string 77. Write a program to insert a word in a string 78. Write a program to search a word in a string 79. Write a program to insert a word in a sentence 80. Write a program to find the length of each string in a 2-dimensional array 81. Write a program to find sort each string in a 2-dimensional array 82. Write a program to change the case of each string in a 2-dimensional array 83. Write a program to change the reverse each string in a 2-dimensional array 84. Write a program to change the reverse each string in a 2-dimensional array 85. Write a program to change the reverse each string in a 2-dimensional array 86. Write a program to change the reverse each string in a 2-dimensional array 87. Write a program to change the reverse each string in a 2-dimensional array 88. Write a program to change the reverse each string in a 2-dimensional array 89. Write a program to change the reverse each string in a 2-dimensional array 89. Write a program to change the reverse each string in a 2-dimensional array 89. Write a program to change the reverse each string in a 2-dimensional array 89. Write a program to change the reverse each string in a 2-dimensional array 89. Write a program to check Armstrong number using user-defined function 89. Write a program to create a program to check armstrong number using funct | | |
|--|------|---|
| 68. Write a program to find the number of vowels, consonants, digits and white space in string using Switch-case 69. Write a program to concatenate two strings 70. Write a program to find the total number of words in a sentence 71. Write a program to reverse a sentence 72. Write a program to reverse a sentence 73. Write a program to sort elements in different orders in string 74. Write a program to insert a character in a string 75. Write a program to search a character in a string 76. Write a program to search a character in a string 77. Write a program to insert a word in a string 78. Write a program to insert a word in a string 79. Write a program to delete a character in a string 79. Write a program to delete a word in a sentence 80. Write a program to find the length of each string in a 2-dimensional array 81. Write a program to find sort each string in a 2-dimensional array 82. Write a program to change the case of each string in a 2-dimensional array 83. Write a program to display prime numbers between m and n using function 85. Write a program to change the reverse each string in a 2-dimensional array 86. Write a program to change the reverse each string in a 2-dimensional write a program to change the reverse each string in a 2-dimensional write a program to change the reverse each string in a 2-dimensional write a program to change the reverse each string in a 2-dimensional write a program to check Armstrong number using user-defined function 87. Write a program to check Armstrong number using user-defined function 88. Write a program to calculate factorial of a number using function 89. Write a program to calculate factorial of a number using function 90. Write a program to calculate power of a number using function 91. Write a program to add two complex numbers by system using structure 93. Write a program to add two distances (in inch-feet) system using structure 94. Write a program to add two distances (in inch-feet) system using structure and display the roll no, name and total marks of each stud | 66. | Write a program to find the frequency of characters in string |
| case 69. Write a program to concatenate two strings 70. Write a program to find the total number of words in a sentence 71. Write a program to reverse a sentence 72. Write a program to reverse a sentence 73. Write a program to remove all characters in a string except alphabet 73. Write a program to sort elements in different orders in string 74. Write a program to insert a character in a string 75. Write a program to search a character in a string 76. Write a program to search a character in a string 77. Write a program to search a character in a string 78. Write a program to insert a word in a sentence 79. Write a program to search a word in a sentence 80. Write a program to delete a word in a sentence 80. Write a program to find the length of each string in a 2-dimensional array 81. Write a program to change the case of each string in a 2-dimensional array 82. Write a program to change the case of each string in a 2-dimensional array 83. Write a program to change the reverse each string in a 2-dimensional array 84. Write a program to change the reverse each string in a 2-dimensional array 85. Write a program to check Armstrong number using user-defined function 86. Write a program to check Armstrong number using user-defined function 87. Write a program to calculate factorial of a number using function 88. Write a program to reverse a sentence using function 99. Write a program to accludate factorial of a number using function 90. Write a program to calculate power of a number using function 91. Write a program to store information (name, roll and marks) of student using structure 93. Write a program to add two complex numbers by passing structure to a function 95. Write a program to accludate between two time period 96. Write a program to access elements of an array using structure and display the roll no, name and total marks of each student 97. Write a program to some information of 10 students using structure and display the roll no, name and total marks of each student | 67. | Write a program to find the total number of vowels in the string |
| 69. Write a program to concatenate two strings 70. Write a program to find the total number of words in a sentence 71. Write a program to reverse a sentence 72. Write a program to reverse a sentence 73. Write a program to sort elements in different orders in string 74. Write a program to insert a character in a string 75. Write a program to insert a character in a string 76. Write a program to delete a character in a string 77. Write a program to insert a word in a string 78. Write a program to search a word in a string 79. Write a program to search a word in a sentence 79. Write a program to delete a word in a sentence 80. Write a program to find the length of each string in a 2-dimensional array 81. Write a program to find sort each string in a 2-dimensional array 82. Write a program to change the case of each string in a 2-dimensional array 83. Write a program to change the reverse each string in a 2-dimensional array 84. Write a program to change the reverse each string in a 2-dimensional array 85. Write a program to check Armstrong number using user-defined function 86. Write a program to check whether a number can be expressed as sum of two prime numbers using function 87. Write a program to check whether a number using function 88. Write a program to calculate factorial of a number using function 99. Write a program to calculate factorial of a number using function 90. Write a program to convert binary number to decimal and vice-versa using function 91. Write a program to convert binary number to decimal and vice-versa using function 92. Write a program to add two distances (in inch-feet) system using structure 93. Write a program to add two distances (in inch-feet) system using structure 94. Write a program to add two complex numbers by passing structure to a function 95. Write a program to add two complex numbers by passing structure to a function 96. Write a program to add two complex numbers of an array using call by reference 97. Write a program to store information (name, roll and marks) of student | 68. | Write a program to find the number of vowels, consonants, digits and white space in string using Switch - |
| 70. Write a program to find the total number of words in a sentence 71. Write a program to reverse a sentence 72. Write a program to remove all characters in a string except alphabet 73. Write a program to sort elements in different orders in string 74. Write a program to search a character in a string 75. Write a program to search a character in a string 76. Write a program to delete a character in a string 77. Write a program to search a character in a string 78. Write a program to insert a word in a string 79. Write a program to delete a word in a sentence 79. Write a program to search a word in a sentence 80. Write a program to find the length of each string in a 2-dimensional array 81. Write a program to find sort each string in a 2-dimensional array 82. Write a program to change the case of each string in a 2-dimensional array 83. Write a program to change the reverse each string in a 2-dimensional array 84. Write a program to display prime numbers between m and n using function 85. Write a program to check Armstrong number using user-defined function 86. Write a program to check Whether a number can be expressed as sum of two prime numbers using function 87. Write a program to clack whether a number using function 88. Write a program to calculate factorial of a number using function 89. Write a program to reverse a sentence using function 90. Write a program to calculate factorial of a number using function 91. Write a program to store information (name, roll and marks) of student using structure 93. Write a program to add two distances (in inch-feet) system using structure 94. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student 97. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student | | |
| 71. Write a program to reverse a sentence 72. Write a program to reverse a sentence rows with a program to reverse a sentence rows with a program to sort elements in different orders in string 74. Write a program to insert a character in a string 75. Write a program to search a character in a string 76. Write a program to delete a character in a string 77. Write a program to insert a word in a string 78. Write a program to search a word in a sentence 79. Write a program to search a word in a sentence 80. Write a program to find the length of each string in a 2-dimensional array 81. Write a program to find sort each string in a 2-dimensional array 82. Write a program to change the case of each string in a 2-dimensional array 83. Write a program to change the reverse each string in a 2-dimensional array 84. Write a program to check arrating in a 2-dimensional array 85. Write a program to check whether a number between m and n using function 86. Write a program to check whether a number can be expressed as sum of two prime numbers using function 87. Write a program to check whether a number can be expressed as sum of two prime numbers using function 88. Write a program to calculate factorial of a number using function 89. Write a program to calculate power of a number using function 90. Write a program to calculate power of a number using function 91. Write a program to store information (name, roll and marks) of student using structure 92. Write a program to add two distances (in inch-feet) system using structure 93. Write a program to add two distances (in inch-feet) system using structure 94. Write a program to add two complex numbers by passing structure to a function 95. Write a program to add two complex numbers by passing structure to a function 96. Write a program to add two complex numbers by passing structure and display the roll no, name and total marks of each student 97. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student | | |
| 72. Write a program to remove all characters in a string except alphabet 73. Write a program to sort elements in different orders in string 74. Write a program to insert a character in a string 75. Write a program to search a character in a string 76. Write a program to delete a character in a string 77. Write a program to insert a word in a string 78. Write a program to search a word in a sentence 79. Write a program to delete a word in a sentence 80. Write a program to find the length of each string in a 2-dimensional array 81. Write a program to find sort each string in a 2-dimensional array 82. Write a program to change the case of each string in a 2-dimensional array 83. Write a program to change the reverse each string in a 2-dimensional array 84. Write a program to change the reverse each string in a 2-dimensional array 85. Write a program to change the reverse each string in a 2-dimensional array 86. Write a program to check Armstrong number using user-defined function 87. Write a program to check whether a number can be expressed as sum of two prime numbers using function 88. Write a program to claculate factorial of a number using function 89. Write a program to calculate factorial of a number using function 90. Write a program to calculate power of a number using function 91. Write a program to convert binary number to decimal and vice-versa using function 92. Write a program to add two distances (in inch-feet) system using structure 93. Write a program to add two distances (in inch-feet) system using structure 94. Write a program to add two complex numbers by passing structure to a function 95. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student 97. Write a program to solve a program to a calculate between two time period 98. Write a program to solve solve solve solve sumbers by passing structure and display the roll no, name and total marks of each student | | |
| 73. Write a program to sort elements in different orders in string 74. Write a program to insert a character in a string 75. Write a program to search a character in a string 76. Write a program to search a character in a string 77. Write a program to elete a character in a string 78. Write a program to insert a word in a sentence 79. Write a program to delete a word in a sentence 80. Write a program to find the length of each string in a 2-dimensional array 81. Write a program to find sort each string in a 2-dimensional array 82. Write a program to change the case of each string in a 2-dimensional array 83. Write a program to change the reverse each string in a 2-dimensional array 84. Write a program to display prime numbers between m and n using function 85. Write a program to check Armstrong number using user-defined function 86. Write a program to check whether a number can be expressed as sum of two prime numbers using function 87. Write a program to find the sum of n natural numbers using function 88. Write a program to calculate factorial of a number using function 90. Write a program to calculate power of a number using function 91. Write a program to convert binary number to decimal and vice-versa using function 92. Write a program to add two distances (in inch-feet) system using structure 93. Write a program to add two distances (in inch-feet) system using structure 94. Write a program to store information (name, roll and marks) of student using structure 95. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student 97. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student 98. Write a program to swap numbers of an array using pointer 99. Write a program to sowap numbers of an array using pointer | | |
| 74. Write a program to insert a character in a string 75. Write a program to search a character in a string 76. Write a program to search a character in a string 77. Write a program to delete a character in a string 78. Write a program to insert a word in a string 78. Write a program to search a word in a sentence 79. Write a program to delete a word in a sentence 80. Write a program to find the length of each string in a 2-dimensional array 81. Write a program to find sort each string in a 2-dimensional array 82. Write a program to change the case of each string in a 2-dimensional array 83. Write a program to display prime numbers between m and n using function 85. Write a program to display prime numbers between m and n using function 86. Write a program to check Armstrong number using user-defined function 87. Write a program to check whether a number can be expressed as sum of two prime numbers using function 88. Write a program to calculate factorial of a number using function 89. Write a program to reverse a sentence using function 90. Write a program to calculate factorial of a number using function 91. Write a program to store information (name, roll and marks) of student using structure 93. Write a program to add two distances (in inch-feet) system using structure 94. Write a program to add two complex numbers by passing structure to a function 95. Write a program to store information (name, roll and marks) of student using structure 96. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student 97. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student 98. Write a program to swap numbers of an array using pointer | | Write a program to remove all characters in a string except alphabet |
| 75. Write a program to search a character in a string 76. Write a program to delete a character in a string 77. Write a program to insert a word in a string 78. Write a program to search a word in a sentence 79. Write a program to search a word in a sentence 80. Write a program to find the length of each string in a 2-dimensional array 81. Write a program to find sort each string in a 2-dimensional array 82. Write a program to change the case of each string in a 2-dimensional array 83. Write a program to change the reverse each string in a 2-dimensional array 84. Write a program to display prime numbers between m and n using function 85. Write a program to check Armstrong number using user-defined function 86. Write a program to check whether a number can be expressed as sum of two prime numbers using function 87. Write a program to find the sum of n natural numbers using function 88. Write a program to calculate factorial of a number using function 90. Write a program to calculate power of a number using function 91. Write a program to convert binary number to decimal and vice-versa using function 92. Write a program to store information (name, roll and marks) of student using structure 93. Write a program to add two distances (in inch-feet) system using structure 94. Write a program to store information (name, roll and marks) of student using structure 95. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student 97. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student 98. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student 99. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student | | |
| 76. Write a program to delete a character in a string 77. Write a program to insert a word in a string 78. Write a program to search a word in a sentence 79. Write a program to delete a word in a sentence 80. Write a program to find the length of each string in a 2-dimensional array 81. Write a program to find sort each string in a 2-dimensional array 82. Write a program to change the case of each string in a 2-dimensional array 83. Write a program to change the reverse each string in a 2-dimensional array 84. Write a program to display prime numbers between m and n using function 85. Write a program to check Armstrong number using user-defined function 86. Write a program to check whether a number can be expressed as sum of two prime numbers using function 87. Write a program to find the sum of n natural numbers using function 88. Write a program to calculate factorial of a number using function 89. Write a program to calculate power of a number using function 90. Write a program to convert binary number to decimal and vice-versa using function 91. Write a program to store information (name, roll and marks) of student using structure 93. Write a program to add two distances (in inch-feet) system using structure 94. Write a program to add two complex numbers by passing structure to a function 95. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student 97. Write a program to access elements of an array using pointer 98. Write a program to access elements of an array using pointer 99. Write a program to find largest number in an array using function | | |
| 77. Write a program to insert a word in a string 78. Write a program to search a word in a sentence 79. Write a program to delete a word in a sentence 80. Write a program to find the length of each string in a 2-dimensional array 81. Write a program to find sort each string in a 2-dimensional array 82. Write a program to change the case of each string in a 2-dimensional array 83. Write a program to change the reverse each string in a 2-dimensional array 84. Write a program to display prime numbers between m and n using function 85. Write a program to check Armstrong number using user-defined function 86. Write a program to check whether a number can be expressed as sum of two prime numbers using function 87. Write a program to find the sum of n natural numbers using function 88. Write a program to calculate factorial of a number using function 89. Write a program to calculate factorial of a number using function 90. Write a program to calculate power of a number using function 91. Write a program to convert binary number to decimal and vice-versa using function 92. Write a program to store information (name, roll and marks) of student using structure 93. Write a program to add two distances (in inch-feet) system using structure 94. Write a program to add two complex numbers by passing structure to a function 95. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student 97. Write a program to access elements of an array using pointer 98. Write a program to swap numbers of an array using call by reference | | |
| 78. Write a program to search a word in a sentence 79. Write a program to delete a word in a sentence 80. Write a program to find the length of each string in a 2-dimensional array 81. Write a program to find sort each string in a 2-dimensional array 82. Write a program to change the case of each string in a 2-dimensional array 83. Write a program to change the reverse each string in a 2-dimensional array 84. Write a program to display prime numbers between m and n using function 85. Write a program to check Armstrong number using user-defined function 86. Write a program to check whether a number can be expressed as sum of two prime numbers using function 87. Write a program to find the sum of n natural numbers using function 88. Write a program to calculate factorial of a number using function 99. Write a program to calculate factorial of a number using function 90. Write a program to calculate power of a number using function 91. Write a program to convert binary number to decimal and vice-versa using function 92. Write a program to add two distances (in inch-feet) system using structure 93. Write a program to add two distances (in inch-feet) system using structure 94. Write a program to store information (name, roll and marks) of student using structure 95. Write a program to store information system using structure to a function 96. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student 97. Write a program to store selements of an array using call by reference 99. Write a program to find largest number in an array using function | | Write a program to delete a character in a string |
| 79. Write a program to delete a word in a sentence 80. Write a program to find the length of each string in a 2-dimensional array 81. Write a program to find sort each string in a 2-dimensional array 82. Write a program to change the case of each string in a 2-dimensional array 83. Write a program to change the reverse each string in a 2-dimensional array 84. Write a program to display prime numbers between m and n using function 85. Write a program to check Armstrong number using user-defined function 86. Write a program to check whether a number can be expressed as sum of two prime numbers using function 87. Write a program to ciaculate factorial of a number using function 88. Write a program to calculate factorial of a number using function 99. Write a program to reverse a sentence using function 90. Write a program to calculate power of a number using function 91. Write a program to convert binary number to decimal and vice-versa using function 92. Write a program to store information (name, roll and marks) of student using structure 93. Write a program to add two distances (in inch-feet) system using structure 94. Write a program to add two complex numbers by passing structure to a function 95. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student 97. Write a program to access elements of an array using pointer 98. Write a program to swap numbers of an array using call by reference 99. Write a program to swap numbers of an array using function | | |
| 80. Write a program to find the length of each string in a 2-dimensional array 81. Write a program to find sort each string in a 2-dimensional array 82. Write a program to change the case of each string in a 2-dimensional array 83. Write a program to change the reverse each string in a 2-dimensional array 84. Write a program to display prime numbers between m and n using function 85. Write a program to check Armstrong number using user-defined function 86. Write a program to check whether a number can be expressed as sum of two prime numbers using function 87. Write a program to find the sum of n natural numbers using function 88. Write a program to calculate factorial of a number using function 89. Write a program to reverse a sentence using function 90. Write a program to calculate power of a number using function 91. Write a program to convert binary number to decimal and vice-versa using function 92. Write a program to store information (name, roll and marks) of student using structure 93. Write a program to add two distances (in inch-feet) system using structure 94. Write a program to add two complex numbers by passing structure to a function 95. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student 97. Write a program to access elements of an array using call by reference 98. Write a program to store information in an array using call by reference | | |
| 81. Write a program to find sort each string in a 2-dimensional array 82. Write a program to change the case of each string in a 2-dimensional array 83. Write a program to change the reverse each string in a 2-dimensional array 84. Write a program to display prime numbers between m and n using function 85. Write a program to check Armstrong number using user-defined function 86. Write a program to check whether a number can be expressed as sum of two prime numbers using function 87. Write a program to find the sum of n natural numbers using function 88. Write a program to calculate factorial of a number using function 89. Write a program to reverse a sentence using function 90. Write a program to calculate power of a number using function 91. Write a program to convert binary number to decimal and vice-versa using function 92. Write a program to store information (name, roll and marks) of student using structure 93. Write a program to add two distances (in inch-feet) system using structure 94. Write a program to add two complex numbers by passing structure to a function 95. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student 97. Write a program to swap numbers of an array using pointer 98. Write a program to swap numbers of an array using call by reference 99. Write a program to find largest number in an array using function | 79. | |
| 82. Write a program to change the case of each string in a 2-dimensional array 83. Write a program to change the reverse each string in a 2-dimensional array 84. Write a program to display prime numbers between m and n using function 85. Write a program to check Armstrong number using user-defined function 86. Write a program to check whether a number can be expressed as sum of two prime numbers using function 87. Write a program to find the sum of n natural numbers using function 88. Write a program to calculate factorial of a number using function 89. Write a program to reverse a sentence using function 90. Write a program to calculate power of a number using function 91. Write a program to convert binary number to decimal and vice-versa using function 92. Write a program to store information (name, roll and marks) of student using structure 93. Write a program to add two distances (in inch-feet) system using structure 94. Write a program to add two complex numbers by passing structure to a function 95. Write a program to calculate between two time period 96. Write a program to store information of 10 students using structure and display the roll no, name and total marks of each student 97. Write a program to access elements of an array using pointer 98. Write a program to swap numbers of an array using call by reference 99. Write a program to find largest number in an array using function | 80. | |
| 83. Write a program to change the reverse each string in a 2-dimensional array 84. Write a program to display prime numbers between m and n using function 85. Course Code : ECL ES103
Course Title : Digital Electronics
L-T-P/S=Credits : 3-0-0 = 3

Course Category : Engineering Science Course

Pre-requisite Courses (if any) :
Equal Course Code (if any) :
Equivalent Course Code (if any) :

Detailed Syllabus

Basic concepts of Boolean Algebra

Review of number systems - Binary, Hexadecimal, conversion from one to another, complement arithmatic, Signed and unsigned numbers and their arithmetic operations. BCD, Excess-3, Gray and Alphanumeric codes. Review of Boolean algebra, De-Morgan's Theorems, Standard Forms of Boolean Expressions, MinimizationTechniques: K-MAPS, VEM Technique, Q-M (Tabulation) method.

Logic Gates & families

Logic Families: TTL, MOS, CMOS, Bi-CMOS; Performance parameters of IC families: input and output loading, fan-in, fan-out, tri-state, current drive, voltage levels, noise margins, power-speed tradeoff; Unused inputs; Interfacing between logic families.

Combinational Logic Circuits

Problem formulation and design of Basic Combinational Logic Circuits, Combinational Logic Using Universal Gates. Basic Adders, ALU, Parity-Checkers and Generators, Comparators, Decoders, Encoders, Code Converters, Multiplexer (Data Selector), De-multiplexers

Sequential Circuits

Latches, Flip-flops (SR, JK, T, D, Master/Slave FF,) Edge-Triggered Flip-Flops, Flip-Flop Operating Characteristics, Basic Flip-Flop Applications, Asynchronous Counter Operation, Synchronous Counter Operation, Up/Down Synchronous Counters.

Shift registers & Memories

Shift Register Functions, Serial In - Serial Out Shift Registers, Serial In - Parallel Out Shift Registers, Parallel In - Serial Out Shift Registers, Parallel In - Parallel Out Shift Registers, Bidirectional Shift Registers, Basics of Semiconductor Memories, Random-Access Memories (ROM), Read Only Memories (ROMs), Programmable ROM's (PROMs and EPROM's), PAL, PLA.

Pre-requisite Courses (if any) : Equal Course Code (if any) : Equivalent Course Code (if any) :

| Sr | Contents |
|----|--|
| | Introduction to Digital Electronics Lab- Nomenclature of Digital ICs, Specifications, Study of the Data |
| 1 | Sheet, Concept of V _{CC} and Ground, Verification of the Truth Tables of Logic Gates using TTL ICs. |
| 2 | To Study and Verify NAND and NOR as a Universal Gate. |
| 3 | To Design &Verify Operation of Half Adder &Full Adder. |
| 4 | To Study &Verify Half Subtractor and Full Subtractor. |
| 5 | Implementation of 4x1 Multiplexer using IC 74153. |
| 6 | Implementation of 4-Bit Parallel Adder Using 7483 IC. |
| 7 | Implementation and Verification of Decoder/De-Multiplexer using IC 74139. |
| 8 | Verification of State Tables of Rs, J-k, T and D Flip-Flops using NAND & NOR Gates |
| 9 | To Design & Verify the Operation of Magnitude Comparator |
| 10 | Design, and Verify the 4-Bit Asynchronous Counter. |
| 11 | To design and implement a binary to gray and gray to binary converter. |

Course Code : MEM SE103

Course Title : Engineering Graphics with CAD

L-T-P/S=Credits : 1-0-2 = 2

Course Category : Skill Enhancement Course

Pre-requisite Courses (if any) : Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

Introduction of Engineering Graphics: Drawing instruments and their uses, Orthographic Projections: Planes of projection – Projection of points in different quadrants. Orthographic Projection of Straight Line parallel to one plane and inclined to the other plane – Straight Line inclined to both the planes – True Length and inclination of lines with reference planes – Traces of line – Projection of Planes, Projection of Solids.

Section of Solids: Classification of Solids, Section plane perpendicular to one plane and parallel to other, Section plane inclined to one plane and perpendicular to other plane.

Development of Surfaces: Principle, Engineering applications and Methods of development

Introduction to AutoCAD: Starting AutoCAD, AutoCAD screen components, creating a drawing on AutoCAD, invoking different commands, Dialog boxes, Coordinate Systems, Exercises on Drawing of Line, Circle, Arc, Ellipse, Polygon, etc.

Drawing Aids and Editing Commands: Layers, Drafting Settings, Object Snaps, Function and Control keys, various Editing Commands, Editing the Objects with Grips, Grip Types.

Creating Text, Dimensions and Tolerances in AutoCAD: Creating Text, Editing Text, Styles of Dimensioning, Dimensioning System Variables, Editing/Updating Dimensions, Adding Tolerances.

Course Title : Engineering Mathematics-II

L-T-P/S=Credits : 3-1-0 =4

Course Category : Basic Science Course

Pre-requisite Courses (if any) : Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

Vector Calculus:

Beta & Gamma functions. Differentiation of vector functions of scalar variables. Gradient of a scalar field, Divergence & Curl of a vector field and their properties.Line& surface integrals, Greens theorem, Stokes Theorem and Gauss Theorem both in vector & Cartesian forms (statement only) with simple applications

Ordinary Differential Equation(ODE):Formation of ODE, definition of order and degree of ODE and solution, ODE's of first order, method of separation of variables, homogeneous and non-homogeneous differential equations and their solution, exactness and integrating factor, Bernoulli equation, linear ODE's of order, operator method, method of undetermined coefficients, method variation of parameters, solution of simple simultaneous ODE's.

Partial Differential Equation(PDE): Formation of (PDE), Solution of PDE by direct integration, Lagrange's linear equation, Non-linear PDE of first order, Method of separation of variables, Wave & Laplace equations (Two dimensional Polar & Cartesian Co-ordinates).

Suggested Books:

| 3 | R. Zalman, A Course in Ordinary and PDEs, Academic Press, 1 st edition | 2014 | |

Course Outcome

| Sr | Course Outcome | СО |
|----|--|-----|
| 1 | Understand the concepts of vector calculus like directional derivative, gradient, divergence and curl, and their applications. | CO1 |
| 2 | Learn and apply the concepts of vector integral calculus for the computation of work done, circulation, and flux. | CO2 |
| 3 | Formulate the differential equations concerning physical phenomena like electric circuits, wave motion, heat equation etc. | CO3 |
| 4 | Learn various methods of solution of ordinary and partial differential equations | CO4 |
| 5 | Solve various partial differential equations arising in heat conduction problems and wave propagation problems | CO5 |

Course Code : MTL BS106
Course Title : Discrete Structures

L-T-P/S=Credits : 3-1-0 =4

Course Category : Basic Sciences Course

Pre-requisite Courses (if any) :
Equal Course Code (if any) :
Equivalent Course Code (if any) :

Detailed Syllabus Section A

Basic counting Techniques: Unary & Binary relation, equivalence relation. Functions, Injective, Surjective & Bijective mappings.Partial orders, Lattice & Boolean Algebra, Pigeon-hole principle, Binomial and multinomial coefficients, Mathematical Induction, Inclusion-exclusion principle.

Section B

Recurrence relations, Generating functions, Discrete numeric functions, Asymptotics (Big-O, Little-O, asymptotic dominance, growth of functions)

Mathematical Logic: Truth tables, Logical equivalence, rules of inferences, argument and its validity, Methods of proof, Predicate Calculus- Symbolizing everyday language.

Section C

Introduction to Graph, Euler graph, Hamiltonian paths and circuits; Trees, Fundamental Circuits, Distance and Centre, Spanning Tree, Cut-sets and Cut-vertices, Connectivity and Separability, Planar graph, Geometric dual, Combinatorial dual, Matrix representation of graph, Colouring, Chromatic number, Chromatic Polynomial; Covering and Partitioning, Chromatic partitioning, Matching, Covering, Network flows

Detailed Syllabus

Introduction to importance of IDEs like Spyder(Anaconda)/PyCharm for professional programming, explorePython shell as a calculator and for inputting Python

expressions directly, Data Types in. Operators in Python:comparison, arithmetic, logical, Boolean, bitwise, assignment. Python: numbers, list, tuple, strings, set,

dictionary, conversion between various data types

HelloWorld program in Python script, Python keyword and Identifiers, Indentation, Comments,

Data Types. Operators in Python: comparison, arithmetic, logical, Boolean, bitwise, assignment.

Python: numbers, list, tuple, strings, set, dictionary, conversion between various data types

Input and Output in Python, if-else , for loop, while loop,break, pass, continue, global and local variables, Importingother modules/packages and using their functions, creatingrandom numbers/random-choice to create programs forcreating Functions, functions with arguments, returningvalues form functions, lambda expressions, recursion,simple guessing games like Rock -Paper-Scissors. Problemson 1D/2D/3D arrays using list. Problem solving usingdictionary as look-up table.

Global and local variables, Importing othermodules/packages and using their functions, creating randomnumbers/random-choice to

Create programs for simple guessing games like Rock –Paper-Scissors. Problems on 1D/2D/3D arrays using list. Problemsolving using dictionary as look-up table.

Object oriented programming: Class and Object. Definingvariables and functions inside class. Creating objects, Inheritance, Multiple and Multi Level Inheritance, Functionover-riding.

Concept of composing objects of a different class in anobject, problems on object composition

Python's de-facto GUI package like tkinter or alternativepackages like: wxPython, PyQt (PySide), Pygame, Pyglet,and PyGTK.

Creating labels, buttons, entry (textbox), combobox,checkbutton, radiobutton, scrolledText (textarea), spinbox,progressbar, menubar, filedialog, tabs etc.

Creating GUI simple games like Tic-Tac-Toe

Dicussion about implementation of python in Machine learning Algorithms, Python with Data Sets,

Detailed Syllabus

Unit-1: INTRODUCTION

Introduction to programming methodologies and design of algorithms, Structured programming concepts, Study and implementation of basic data structures like: Arrays, multidimensional arrays and their organization, introduction to sparse arrays

Unit-2: LINKED LIST

Linked list (singly, doubly and circular), Concept of linked list, Difference of link list & array, Single linked list, Representation, Operations, Traversing, Insertion(first node, last node, at a position, after a node value), Deletion(first node, last node, at a position, after a node value), Double linked list, Representation, Operations, traversing, Insertion (first node, last node, at a position, after a node value), Deletion (first node, last node, at a position, after a node value), Circular link list & header link list example

Unit-3: STACKS & QUEUES

Stacks, Queues, Operations on Stack, Array & Linked Representation, Programs on stack, Push & Pop operations, traversing. Operations on Queue, Array & Linked Representation, Programs on stack, Insert & Delete operations, Circular queue, representation, Deque, Priority Queue, Application of queue

Unit-4: SORTING AND SEARCHING

Bubble sort, Selection sort, Insertion sort, Quick sort, Merge sort, Heap sort, Radix sort

Unit-5: TREES AND GRAPHS

Tree terminology, Binary tree, Complete Binary Tree, Binary search tree, Tree Traversals, Creation of Binary Tree from traversal methods, Expression Tree & expression, Manipulation, Binary Search Tree, Insertion & deletion in BST(Program), AVL Tree, M-way Search Tree, B+ tree, Insertion & deletion, Graph:, Graph terminology, Representation of graphs, Path matrix, Graph Traversal, BFS (breadth first search), DFS (depth first search), Minimum spanning Tree, Kruskal's Algorithm & Prim's Algorithm, Warshall's algorithm (shortest path, algorithm)., Introduction to trees and graphs and traversal methods.

Course Outcome

| Sr | Course Outcome | СО |
|----|---|-----|
| 1 | Select appropriate data structure as applied to specified problem definition. | CO1 |
| 2 | Understand basic data structures such as arrays, linked lists, stacks and queues. | CO2 |
| 3 | Apply Algorithm for solving problems like sorting, searching, insertion and deletion of data | CO3 |
| 4 | Demonstrate a thorough understanding of how data structures impact the performance of algorithms. | CO4 |

Course Code : CSP DC104
Course Title : Data Structure Lab

L-T-P/S=Credits : 0-0-2 = 1
Course Category : Departmental Core course

Pre-requisite Courses (if any) :
Equal Course Code (if any) :
Equivalent Course Code (if any) :

| Sr | Contents |
|----|---|
| 1 | Design, Develop and Implement a menu driven Program in C for the following Array operations a. Creating an Array of N Integer Elements b. Display of Array Elements with Suitable Headings c. Inserting an Element (ELEM) at a given valid Position (POS) d. Deleting an Element at a given valid Position(POS) e. Exit. Support the program with functions for each of the above operations. |
| 2 | Design, Develop and Implement a Program in C for the following operations on Strings a. Read a main String (STR), a Pattern String (PAT) and a Replace String (REP) b. Perform Pattern Matching Operation: Find and Replace all occurrences of PAT in STR with REP if PAT exists in STR. Report suitable messages in case PAT does not exist in STR. Support the program with functions for each of the above operations. Don't use Built-in functions. |
| 3 | Design, Develop and Implement a menu driven Program in C for the following operations on STACK of Integers (Array Implementation of Stack with maximum size MAX) a. Push an Element on to Stack b. Pop an Element from Stack c. Demonstrate how Stack can be used to check Palindrome d. Demonstrate Overflow and Underflow situations on Stack e. Display the status of Stack f. Exit Support the program with appropriate functions for each of the above operations |
| 4 | Design, Develop and Implement a Program in C for converting an Infix Expression to Postfix Expression. Program should support for both parenthesized and free parenthesized expressions with the operators: +, -, *, /, %(Remainder), ^ (Power) and alphanumeric operands. |
| 5 | Design, Develop and Implement a Program in C for the following Stack Applications a. Evaluation of Suffix expression with single digit operands and operators: +, -, *, /, %, ^ b. Solving Tower of Hanoi problem with n disks. |
| 6 | Design, Develop and Implement a menu driven Program in C for the following operations on Circular QUEUE of Characters (Array Implementation of Queue with maximum size MAX) a. Insert an Element on to Circular QUEUE b. Delete an Element from Circular QUEUE c. Demonstrate Overflow and Underflow situations on Circular QUEUE d. Display the status of Circular QUEUE e. Exit Support the program with appropriate functions for each of the above operations. |
| 7 | Design, Develop and Implement a menu driven Program in C for the following operations on Singly Linked List (SLL) of Student Data with the fields: USN, Name, Branch, Sem, PhNo a. Create a SLL of N Students Data by using front insertion. b. Display the status of SLL and count the number of nodes in it c. Perform Insertion and Deletion at End of SLL d. Perform Insertion and Deletion at Front of SLL e. Demonstrate how this SLL can be used as STACK and QUEUE f. Exit |
| 8 | Design, Develop and Implement a menu driven Program in C for the following operations on |

| | Doubly Linked List (DLL) of Employee Data with the fields: SSN, Name, Dept, Designation, Sal, PhNo |
|----|--|
| | a. Create a DLL of N Employees Data by using end insertion. b. Display the status of DLL and count the number of nodes in it c. Perform Insertion and Deletion at End of DLL d. Perform Insertion and Deletion at Front of DLL e. Demonstrate how this DLL can be used as Double Ended Queue f. Exit |
| 9 | Design, Develop and Implement a Program in C for the following operations on Singly Circular Linked List (SCLL) with header nodes a. Represent and Evaluate a Polynomial P(x,y,z) = 6x2y2z-4yz5+3x3yz+2xy5z-2xyz3 b. Find the sum of two polynomials POLY1(x,y,z) and POLY2(x,y,z) and store the result in POLYSUM(x,y,z) |
| | Support the program with appropriate functions for each of the above operations |
| 10 | Binary Search Tree (BST) of Integers a. Create a BST of N Integers: 6, 9, 5, 2, 8, 15, 24, 14, 7, 8, 5, 2 b. Traverse the BST in In order, Preorder and Post Order c. Search the BST for a given element (KEY) and report the appropriate message d. Delete an element(ELEM) from BST Exit |
| 11 | Design, Develop and Implement a Program in C for the following operations on Graph(G) of Cities a. Create a Graph of N cities using Adjacency Matrix. b. Print all the nodes reachable from a given starting node in a digraph using BFS method c. Check whether a given graph is connected or not using DFS method. |
| 12 | Given a File of N employee records with a set K of Keys(4-digit) which uniquely determine the records in file F. Assume that file F is maintained in memory by a Hash Table(HT) of m memory locations with L as the set of memory addresses (2-digit) of locations in HT. Let the keys in K and addresses in L are Integers. Design and develop a Program in C that uses Hash function H: K ®L as H(K)=K mod m (remainder method), and implement hashing technique to map a given key K to the address space L. Resolve the collision (if any) using linear probing. |

L-T-P/S=Credits : 3-0-0 = 3

Course Category : Basic Science Course

Pre-requisite Courses (if any) : Nil Equal Course Code (if any) : Nil Equivalent Course Code (if any) : Nil

Detailed Syllabus

Introduction to Basic Biology

Cell, Cell theory, Cell shapes, structure of a Cell, prokaryotic and eukaryotic Cell, Plant Cell and animal Cell, protoplasm, Plant Tissue and Animal Tissue. Cell cycle

Introduction to Bio-molecules

Carbohydrates, proteins, Amino acid, nucleic acid (DNA and RNA) and their types. Enzymes and their application in Industry. Large scale production of enzymes by Fermentation

Gene structure and recombinant DNA technology

Prokaryotic gene and Eukaryotic gene structure, gene replication, Transcription and Translation in Prokaryotes and Eukaryotes. Recombinant DNA technology and introduction to cloning.

Applications of Biology

Brief introduction to Production of vaccines, Enzymes, antibodies, Cloning in microbes, plants and animals, Basics of biosensors, biochips, Bio fuels. Tissue engineering and its application, transgenic plants and animals, Stem cell and applications. Bio engineering (production of artificial limbs, joints and other parts of body).

Pre-requisite Courses (if any) :
Equal Course Code (if any) :
Equivalent Course Code (if any) :

Detailed Syllabus

Unit-I

8085 Architecture: Introduction to microprocessors and microcontrollers, 8085 Processor Architecture, Internal operations, Instructions and timings, Programming the 8085 – Introduction to 8085 instructions, addressing modes and Programming techniques with Additional instruction.

Unit-II

Stacks and subroutines, interfacing peripherals - Basic interfacing concepts, interfacing output displays, interfacing input keyboards. Interrupts - 8085 Interrupts, Programmable Interrupt Controller (8259A). Direct Memory Access (DMA) - DMA Controller (Intel 8257), Interfacing 8085 with Digital to Analog and Analog to Digital converters.

Unit-III

Programmable peripheral interface (Intel 8255A), Programmable communication interface (Intel 8251), Programmable. Interval timer (Intel 8253 and 8254), Programmable Keyboard / Display controller (Intel 8279). Serial and parallel bus standards RS 232 C, IEEE 488.

Unit-IV

Introduction to Microcontrollers, 8051 – Architecture – Instruction set, Addressing modes and Programming Techniques. Comparison of various families of 8-bit micro controllers. System Design Techniques Interfacing of LCD, ADC, Sensors, Stepper motor, keyboard and DAC using microcontrollers Communication standards – serial RS232 and USB

Unit-V

Microprocessor Applications and trends in microprocessor Technology – 8-bit, 16-bit and 32-bit microprocessors. Advanced Processor Architecture – Register structure, Instruction set, Addressing modes of 8086. Features of advanced microprocessors. 80386, 80486, Pentium and Multi-Core Processors.

Equal Course Code (if any) :
Equivalent Course Code (if any) :

| Sr | Contents | |
|----|---|--|
| 1 | Write a program to add two 8-bit numbers stored in the memory location 2300H & 2301H and store the result in memory location 2302H and the carry in location 2303H. | |
| 2 | Write a program to transfer 16 bytes of data stored at memory location 2300H to 2400H. | |

| 3 | Write a program to add two twodigit BCD numbers stored in memory location 2100H & 2101H, the 3 digit BCD result should be stored from memory location 2102H onwards |
|----|---|
| | Write a program to add two 16 bit numbers stored in memory location 2100H & 2102H and store |
| 4 | the sum at memory location 2104H onwards |
| 5 | Write a program to subtract two 8-bit numbers |
| 6 | Write a program to subtract two 0 bit numbers Write a program to subtract two 16-bit numbers |
| | Write a program to subtract two ligit BCD numbers stored at memory location 2100H & 2101H and |
| 7 | store the result in memory location 2102H |
| 8 | Write a program to unpack two digit BCD number stored at memory location 2100H and store the |
| 8 | unpacked BCD numbers at memory locations 2101H & 2102H |
| 9 | Write a program to read a two digit BCD number stored at memory location 2100H and switch the |
| 9 | digits of the BCD number and store the result at memory location 2101H |
| 10 | Write a program to sort 16 numbers stored at memory location 2100H to 210FH in ascending order |
| 11 | Write a program to convert an 8-bit binary number to ASCII Hex Code |
| 12 | Write a program to convert a two digit BCD number, stored at location 2100H, into its binary |
| 12 | equivalent number and store the result in memory location 2200H |
| 13 | Write a program to convert a Binary number to its equivalent BCD number |
| 14 | Write a Program to generate a ramp waveform |
| 15 | Write a Program to generate staircase waveform |
| 16 | Write a Program to display the character "V" in 8x8 LED Matrix |
| 17 | Write a Program to rotate a Stepper Motor in Anticlockwise Direction |
| 18 | Write a Program to Control Traffic |
| 19 | Write a program to interface ADC 0808 with the 8085 microprocessor and store the A/D result in |
| 19 | memory location 3200H |
| 20 | Write a program to convert an 8-bit binary number to ASCII |
| 21 | Write a program to blink Port C bit 0 of the 8255. Assume address of control word register of 8255 |
| 21 | as OBH. Use Bit Set/Reset mode |
| | Calculate the sum of series of even numbers from the list of numbers. The length of the list is in |
| 22 | memory location 2200H and the series itself begins from memory location 2201H. Assume the sum |
| | to be 8 bit number so you can ignore carries and store the sum at memory location 2210H |
| 23 | Design a system (both Software and Hardware) that will cause 4 LEDs to flash 10 times when a |
| 23 | push button switch is pressed. Use 8255 |

Detailed Syllabus

Unit - I: Introduction

Basic Concepts: Symbols, Strings, Language, Formal Language, Natural Language. Basic Machine and Finite State Machine. Finite Automata: Definition and Construction – Deterministic Finite Automata, Non Deterministic Finite Automat, NFA with Epsilon-Moves, Equivalence of NFA and DFA, Minimization of Finite Automata, Concept of Generalized non-deterministic finite automata.

Unit - II: Regular Expressions, Regular Grammar And Languages

Definition and Identities of Regular Expressions, Regular Grammar and Finite Automata: FA to RG and RG to FA, Left Linear and Right Linear Grammar and Inter-conversion between them. Closure Properties of Regular Languages, Non-regular languages and Pumping Lemma.

Unit - III : Context Free Grammar And Languages

Definition and Construction of CFG, Definition, Parse tree, derivation, ambiguity, Ambiguous Grammar and Removal of Ambiguity. Simplification of Grammar. Normal Forms of Grammar: Chomsky normal form and GNF. Non-Context Free Languages, pumping lemma.

Unit - IV : Pushdown Automata

Definition and Construction of Deterministic pushdown automata (DPDA) and Non-Deterministic pushdown automata (NPDA). Pushdown Automata - Examples and Relation with CFGs, Equivalence of PDAs and CFGs, Closure Properties of CFLs.

Unit - V: Turing Machines & Decidability

Definition and Construction of Turing Machines.Languages of TM. Types of TM. Time Complexity of TM, Halting Problem, Decidability/ undecidability

Course Code : CSL DC203

Course Title : Operating Systems

L-T-P/S=Credits : 3-0-0 = 3

Course Category : Departmental Core course

Pre-requisite Courses (if any) **Equal Course Code (if any)** Equivalent Course Code (if any)

Detailed Syllabus

Introduction to OS: Processor management, memory management, file system management, system calls. Process management: Scheduling levels, quantities to be optimized , preemptive/non preemptive, interrupting clock, FIFO, shortest job first, shortest remaining job first, round robin, priority, multilevel queues, multilevel feedback queues.

Concurrent processes: Mutual exclusion and Bernstein's conditions, Fork/Join construct, PARBEGIN/PAREND construct; semaphores: use of semaphores to complement PARBEGIN/PAREND; critical section problem; 2 process critical section problem and solution, both H/W and S/W; monitors; message passing; case studies: dining philosophers problem, reader writer problem and disk head scheduler problem.

Memory management: Single user contiguous: protection; fixed partition multiprogramming; protection, fragmentation, relocation; variable partition multiprogramming: compaction, storage placement strategies; multiprogramming with storage swapping; paging: segmentation; paging and segmentation together; virtual memory: page replacement and strategies, locality, working sets, page fault frequency, demand paging, optimization technique.

Dead locks: Resource concepts, necessary conditions, resource allocation graph, deadlock prevention: three strategies of Havender, deadlock avoidance: Bankers algorithm, deadlock detection: reduction of resource allocation graph, deadlock recovery.

File systems: directory organization, functions, data hierarchy, blocking and buffering, file organization, free space management, allocation techniques: contiguous, non contiguous; sector oriented linked; block: block chaining , index block chaining, block oriented file mapping; **Device management:** types: block, character; PIO, DMA, I/O channels, virtual devices.

Disk scheduling: operations of disks, quantities to be optimized, seek optimization: FCFS, SSTF, SCAN, C-SCAN, M-STEP SCAN, Eschenbach; rotation optimization, system consideration, disk caching and other optimizations.

Suggested Books:

| Sr. | Name of Book, Author, Publisher | Year of |
|-----|---------------------------------|---------|

| | | Publication / Reprint |
|------|--|--------------------------|
| Text | Books | |
| 1 | Operating system concepts : Silberschatz, Addison Wesley Longman | |
| 2 | Modern Operating Systems : Tanenbaum, PH(I) | |
| 3 | Operating systems : H.M.Deitel, Addison Wesley Longman | |
| Refe | Reference Books | |
| 1 | Operating systems : Madnick and Donovan, McGraw-Hill I.E. | |

Course Outcome

| Sr | Course Outcome | СО |
|----|--|-----|
| 1 | To learn different types of operating systems along with of history of operating systems | CO1 |
| | and basic functions of operating systems | |
| 2 | Students will have knowledge of Process management, process synchronization and deadlock handling algorithms, inter-process communication and CPU scheduling algorithms used in operating system. Memory management and virtual memory concepts, I/o Devices management, file management | CO2 |
| 3 | Students will be able to analyze and implement various algorithms used for management, | CO3 |
| | process scheduling, memory allocation and process communication in operating system. | |
| 4 | Analyse the structure of OS and basic architectural components involved in OS design. | CO4 |

Course Code : CSP DC203

: Departmental Core course

Course Category Pre-requisite Courses (if any) **Equal Course Code (if any) Equivalent Course Code (if any)**

| Sr | Contents |
|-----|---|
| 1. | Write a shell script to ask your name, program name and enrolment number and print it on the screen. |
| 2. | Write a shell script to find the sum, the average and the product of the four integers entered |
| 3. | Write a shell program to exchange the values of two variables |
| 4. | Find the lines containing a number in a file |
| 5. | Write a shell script to display the digits which are in odd position in a given 5-digit number |
| 6. | Write a shell program to reverse the digits of five-digit integer |
| 7. | Write a shell script to find the largest among the 3 given numbers |
| 8. | Write a shell program to search for a given number from the list of numbers provided using binary search method |
| 9. | Write a shell program to concatenate two strings and find the length of the resultant string |
| 10. | Write a shell program to find the position of substring in a given string |
| 11. | Write a shell program to display the alternate digits in a given 7-digit number starting from the first digit |
| 12. | Write a shell program to find the gcd for the 2 given numbers |
| 13. | Write a shell program to check whether a given string is palindrome or not. |
| 14. | Write a shell program to find the sum of the series sum=1+1/2++1/n |
| 15. | Write a shell script to find the smallest of four numbers |
| 16. | Write a shell program to add, subtract and multiply the 2 given numbers passed as command line arguments |
| 17. | Write a shell program to convert all the contents into the uppercase in a particular file |
| 18. | Write a shell program to count the characters, count the lines and the words in a particular file |
| 19. | Write a shell program to concatenate the contents of 2 files |
| 20. | Write a shell program to find factorial of given number |
| 21. | WAP that accepts user name and reports if user logged in. |
| 22. | WAP that takes a filename as input and checks if it is executable, if not make it executable. |

| 23. | WAP which displays the following menu and executes the option selected by user: 1. Is 2. pwd 3. Is -I 4. ps -fe |
|-----|---|
| 24. | Write a shell script to find the average of the numbers entered in command line |
| 25. | Write a shell script to sort the given numbers in descending order using Bubble sort |
| 26. | Write a shell program to find the sum of all the digits in a given 5-digit number |
| 27. | Shell script to find occurrence of particular digit in inputted number |
| 28. | Write a shell script to print following pattern. * ** ** ** *** |
| 29. | Write a shell script to print following pattern. 1 23 456 |
| 30. | Create a data file called employee in the format given below: a. EmpCode Character b. EmpName Character c. Grade Character d. Years of experience Numeric e. Basic Pay Numeric Sort the file on EmpCode. Sort the file on EmpName. Sort the file on (i) Decreasing order of basic pay (ii) Increasing order of years of experience. (iii) Display all records with `smith' as a part of employee name. |

Detailed Syllabus

LINTT T

Introduction to Linear Algebra, Matrix Operations, Matrix Types, Inverse, Determinant, Gauss Jordan Method, Minors, Cofactors & Adjugate; Matrix Rank, Eigen Values, Eigen Vectors, Vector Operations, Dot Product, Cross Product; Probability, basic counting Principle, Dependent and Independent Events, Relative Frequency, Complement, Conditional probability, Bayes Theorem

UNIT II:

Introduction to Machine Learning, Paradigms of Machine Learning, Supervised Learning problems, Unsupervised Learning Problems, Reinforcement Learning problems, Classification Algorithms: Naïve Bayesian Classification, Decision Tree, Random Forest, K-Nearest Neighbor, Support Vector Machine

UNIT III:

Bias, variance, Cross-Validation, RoC Curve, AUC Curve, Regression Algorithms: Linear Regression, Logistic Regression, Regularization: Ridge Regression, Lasso Regression, Elastic-Net,

UNIT IV

Ensemble Learning: Decision Tree, Random Forest, Adaboost, Bagging, Boosting, Bootstrapping, Gradient Boost and Extreme Gradient Boost Algorithms, Unsupervised Learning: Clustering algorithms: K-Means Clustering, Semantic Analysis using Machine Learning

UNIT V:

Neural Networks: Basics of ANN, Perceptron, Back Propagation, Recurrent neural Network, Long Short Term Memory NN, Convolution Neural Network, Practical Applications using Python

Suggested Books:

| Sr. | Name of Book, Author, Publisher | Year of Publication / Reprint | |

Course Category : Departmental Core course

Pre-requisite Courses (if any) Equal Course Code (if any)

Equivalent Course Code (if any) :CSL GE401

Detailed Syllabus

Unit I:Artificial Neural Network

Introduction – Fundamental concept – Evolution of Neural Networks – Basic Models of Artificial Neural Networks – Important Terminologies of ANNs – McCulloch-Pitts Neuron – Linear Separability – Hebb Network. Supervised Learning Network: Perceptron Networks – Adaline – Multiple Adaptive Linear Neurons – Back-Propagation Network – Radial Basis Function Network.

Unit II

– Linear Separability – Hebb Network. Supervised Learning Network: Perceptron Networks – Adaline – Multiple Adaptive Linear Neurons – Back-Propagation Network – Radial Basis Function Network.

Unit III:Fuzzy Set Theory Introduction to Classical Sets and Fuzzy sets

Classical Relations and Fuzzy Relations – Tolerance and Equivalence Relations – Noninteractive Fuzzy sets – Membership Functions: Fuzzification – Methods of Membership Value Assignments – Defuzzification – Lambda-Cuts for Fuzzy sets and Fuzzy Relations – Defuzzification Methods.

Unit IV: Fuzzy Set Theory

Fuzzy Arithmetic and Fuzzy Measures: Fuzzy Rule Base and Approximate Reasoning: Truth values and Tables in Fuzzy logic – Fuzzy Propositions – Formation of Rules – Decomposition and Aggregation of rules – Fuzzy Reasoning – Fuzzy Inference Systems (FIS) – Fuzzy Decision Making – Fuzzy Logic Control Systems.

Unit V: (Genetic Algorithm) Introduction – Basic Operators and Terminologies in GAs – Traditional Algorithm vs. Genetic Algorithm – Simple GA – General Genetic Algorithm – The Scheme Theorem – Classification of Genetic Algorithm – Holland Classifier Systems – Genetic Programming. Applications of Soft Computing: A Fusion Approach of Multispectral Images with SAR Image for Flood Area Analysis – Optimization of Travelling Salesman Problem using Genetic Algorithm Approach – Genetic Algorithm based Internet Search Technique – Soft Computing based Hybrid Fuzzy Controllers – Soft Computing based Rocket Engine – Control

Course Title : Design & Algorithm Analysis

L-T-P/S=Credits : 3-0-0 = 3

Course Category : Departmental Core course

Pre-requisite Courses (if any) : Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

Introduction: Definition of algorithm, algorithm specification, performance analysis: Time and space analysis, Asymptotic, recurrence relations.

Design of Efficient algorithms: Graphs, trees, recursion, divide and conquer, balancing, dynamic programming.

Sorting: Merge sort, Heaps and maintaining the heap properties, building a heap, Heap sort, Quicksort: algorithm, performance and anlaysis, Sorting without comparison: Radix sort, counting sort, bucket sort.

Some data structures: Hash tables, hash functions, Open addressing, Binary search trees-insertion and deletion, Balanced trees: AVL trees, m-way trees, B Trees, 2-3 Trees, Binomial heaps: Binomial trees and operations on binomial heaps.

Advanced design and analysis Techniques: Dynamic programming: Definition, Matrix-chain multiplication, Optimal binary search trees, Longest common subsequence, 0-1 knapsack problem.

Greedy algorithms: Definition, Fractional knapsack problem, Huffman coding, Task-scheduling problem.

Divide and conquer algorithm: Definition, Strassen's matrix multiplication, finding minimum and maximum from an array.

Backtracking: Definition, n-queens problem, sum of subset problem.

Graph algorithm: Elementary graph algorithms, Breadth-first and Depth-first search, Minimum spanning trees: Prim's and Krushkal's algorithm, Single source shortest path problem, Bellman-Ford algorithm, Floyd-Warshall algorithm, Johnson's algorithm.Integer and Polynomial arithmetic:Polynomial addition and multiplication.

| 14 | Write a program to Sort the elements using Bucket Sort . |
| 15 | Write a program to sort the element using Radix sort . |
| 16 | Write a program to implement Kruskal's Algorithm for finding Minimum Spanning Tree. |
| 17 | Write a program to implement Prim's Algorithm for finding Minimum Spanning Tree. |
| 18 | Write a program to implement Breadth First search Algorithm. |
| 19 | Write a program to implement Depth First search Algorithm. |

Course Code : CSL DC206

Course Title : Database Management Systems

L-T-P/S=Credits : 3-0-0 = 3

Course Category : Departmental Core course

Pre-requisite Courses (if any) :
Equal Course Code (if any) :
Equivalent Course Code (if any) :

Detailed Syllabus

Introductory Database Concepts: Introduction to data processing, overview of files and file systems, drawbacks of files systems, concept of a database, data abstraction and data independence, data models, database language, database users and administrators, transaction management, database system structure. Entity Relationship Model: Basic concepts, constraints, design issues, entity relationship diagram, week entity sets, extended ER features, design of ER database schema, reduction of ER schema to tables. Relational Model: Concept of a relation, primary and secondary keys, foreign keys, structure of relational databases, the relational algebra and extended relational algebra operations, formulation of queries, modification of the database, views.

SQL: Background, basic structure, set operations, aggregate functions, null values, nested queries, views, complex queries, database modification, DDL, embedded SQL, stored procedures and functions, dynamic SQL, other SQL features.

Integrity & Security: Domain constraints, referential integrity, assertions, triggers, triggers and assertions in SQL, security in authorization in SQL.

Relational Database Design: First normal form, pitfalls in relational database design, functional dependencies, decomposition, desirable properties of decomposition, boycecodd normal form, third and fourth normal forms, other normal forms.

Transactions: Transaction concept, transaction state, implementation of atomicity and durability, concurrent executions, serializability, recoverability, implementation of isolation, transaction definition in SQL.

Concurrency Control: Lock based protocols, timestamp based protocols, validation based protocols, multiple granularity, multiversion schemes, deadlock handling, inset and delete operations.

Recovery Systems: Failure classification, storage structure, recovery and atomicity, log based recovery, shadow paging, recovery with concurrent transitions, buffer management.

Course Contents: Unit-I: Introduction

Overview of Digital Fundamentals

Unit-II:

Register Transfer and Micro operation

Register Transfer Language, Register Transfer, Bus and Memory Transfer, Arithmetic Micro operations, Logic Micro operations and Shift, Micro operations.

Unit-III:

Basic Computer Organization and Design

Instruction Codes, Computer Registers, Computer Instructions, Timing & Control, Instruction Cycle, Memory Reference Instructions, Input-Output and Interrupts, Design of Basic Computer, Design of Accumulator Logic.

Unit-IV

Micro-programmed Control Unit

Control Memory, Address Sequencing.

Central Processing Unit:Introduction, General Register Organization, Stack Organization, Instruction Formats, Addressing Modes.

Unit-V

Computer Arithmetic

Introduction, Addition and Subtraction, Multiplication Algorithms, Division Algorithms, Floating Point Arithmetic Operation, Decimal Arithmetic Unit, Decimal Arithmetic Operations.

Unit-VI

Input-Output Organization

Peripheral devices, Input - Output interface, Asynchronous Data Transfer, Modes of Data Transfer, Priority Interrupt, Direct Memory Access, Input - Output Processor.

Unit-VII

Memory Organization

Memory Hierarchy, Main Memory, Auxiliary Memory, Associative Memory, Cache Memory, Virtual Memory, Memory Management Hardware.

Unit-VIII

Multiple ProcessOrganization

Flynn's classification of parallel processing systems, pipelining concepts

Course Title : Compiler Design
L-T-P/S=Credits : 3-1-0 =4

Course Category : Departmental Core course

Pre-requisite Courses (if any) : Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

Unit I: Introduction

Issues related to programming Language Design, Issues related to Finite-State Machines, Phases of Compiler Design, Lexical Analysis, Error Detection and Recovery.

Unit II: Basic Parsing Techniques

Parsers, Shift-Reduced Parsers, Operator-Precedence Parsing, Predictive Parsers.

Unit III: Top-Down Parsing, Bottom-up Parsing

LL(1) Grammars, Recursive Descent Parsers, LR Grammars – Concepts and Terminology, LR(0) Parsers, SLR(1) Parsers, Canonical LR(1) Parsers, LALR(1) Parsers, using ambiguous grammar. Attributed Translation Grammar, L-Attributed Translation Grammar.

Unit IV: Syntax-Directed Translation (SDT)

SDT Schemes, Implementation of SDTs, Intermediate Code, Parse Trees and Syntax Trees. Three Address Code, Quadruples and Triples. Translation schemes for Declarations, Assignment statements, Boolean Expressions, Flow of control statements, Array references in Arithmetic Expressions, Procedure Calls, Case Statements, and |Structures.

Unit V: Semantic Analysis & Type Checking

Introduction, Implicit-Stacking in Recursive Descent Compilation, Semantic Stacks in Bottom-up Compilation, Action-Symbols in Top-Down Compilation, Type Expressions, Overloaded Functions, Polymorphic Functions.

Unit VI: Symbol Table Handling Techniques

When to construct and Interact with the symbol Table, Symbol-Table Contents, Operations on symbol Table. Symbol Table organizations for Block – Structured Languages.

Unit VII: Run-Time Storage Organization and Management

Static Storage Allocation, Dynamic Storage Allocation, Heap Storage Allocation, Garbage Collection and Compaction.

Unit VIII: Code Optimization

Principal sources of Optimization, Loop Optimization, Loop-Invariant Computation, Induction variable elimination, Other Loop Optimizations, The DAG representation of Basic Blocks. Global Data – Flow Analysis.

Unit IX: Code Generation

Object programs, Problems Code Generation, A simple Code Generator. Register Allocation and Optimization, Code Generation from DAG, PEECPhole optimization.

Detailed Syllabus

Introduction: Uses of Computer Networks, Network Architecture, Reference Model (ISO-OSI, TCP/IP-Overview, IP Address Classes, Subneting), Domain Name Registration & Registrars

The Physical Layer: Theoretical basis for data communication, transmission media-Magnetic

Media, Twisted Pair, Baseband Coaxial Cable, Broadband Coaxial Cable, Fibre Cable, Structured Cabling, Cable Mounting, Cable Testing, Wireless transmission, the telephone system, narrowband ISDN, broadband ISDN and

The Data Link Layer: Data link layer design issues, error detection and correction, data

link protocols, sliding window protocols, Examples of Data Link Protocols.

The Medium Access Sublayer: The channel allocation problem, multiple access protocols, IEEE standard 802 for LANS and MANS, high-speed LANs, satellite networks, Network devices-repeaters, hubs, switches and bridges.

The Network Layer: Network layer design issues, routing algorithms, congestion control algorithm, internetworking, the network layer in the internet, the network layer in ATM networks.

The Transport Layer: A simple transport protocol, internet transport protocols, UDP, introduction to TCP, service model, TCP connection establishment, transmission policy, congestion control, timer management, wireless TCP and UDP, transactional TCP.

The Application Layer: HTTP, electronic mail, SNMP, SMTP, DNS.

Suggested Books:

Course Title : Object Oriented Programming using JAVA

L-T-P/S=Credits : 3-0-0 = 3

Course Category : Departmental Core course

Pre-requisite Courses (if any) :
Equal Course Code (if any) :
Equivalent Course Code (if any) :

Detailed Syllabus

Unit I: Object-Oriented Programming Concepts

OOP concepts, abstraction and encapsulation, inheritance and polymorphism, Java Byte code, JDK, JRE,JVM, garbage collection, java buzzwords, Data types, type casting, arithmetic operators, bitwise operators, relational operators, Boolean and logical operators, assignment operator, ternary (?) Operator, operator precedence, Control statements, and loops: if statement, if-else, while, do-while, for loop, enhanced for loop, nested loops, and statements, break, continue, using command line arguments, Comments

Unit II: Input, Classes & Objects, Strings, Constructors & Inheritance

Input using Scanner, Output, String class, String immutability, String operations, Big Numbers, Arrays, 2D, 3D arrays, Classes and Objects, Methods, Encapsulation, Getters and Setters, access modifiers (public, default, private) declaring objects, assigning an object to reference variables, constructors (default and parameterized), this keyword, finalize keyword, method introduction and returning a value from a method, overloading method, overloading constructor, object as a parameter to the method, returning objects, recursion, understanding static keyword, final keyword, introduction to inner and nested classes, exploring Inheritance basics, use of super, method overriding, abstract class, Object class, defining a package, access protection, importing a package

Unit III: Interface, Exception Handling, Multi-Threading & Collections

Introduction to the interface, defining an interface, variables in the interface, extension of the interface, fundamentals of Exception handling, types of exception, use of try and catch, nested try block, throw, throws, finally keywords, java's built-in exception, creating your exception. The java thread model, thread priorities, synchronization, creating a thread, creating multiple threads, using is Alive() and join(), Synchronization in multiple threads, Collection interface, Set interface, List interface, Queue interface, SortedSet interface, HashSet class, LinkedHashSet class, TreeSet class, ArrayList class, Vector class, LinkedList class, PriorityQueue class, Arrays class, Collections class, map interface, HashTable class,

LinkedHashMap class, HashMap class, Sortedmap interface, TreeMap class, Iterator, ListIterator, Stack

UNIT IV: Swing, Event Handling & JDBC

Exploring Swing and various events, Event Listener interface, Adapter class, Anonymous inner class, creating Frames and Windows, working with graphics, working with color, fonts, layout managers, using buttons, checkboxes, choice lists, lists, scroll bar, text fields, text area, menu bars, and menus, and handling the corresponding events generated by above components, JDBC basics, accessing MySQL database with JDBC

List of Experiments

| Sr | Contents |
|----|--|
| 1 | Program to display Hello world |
| 2 | Program to understand command line arguments |
| 3 | Program to Input values using Scanner/BufferedReader class, do simple calculations and print values |
| 4 | Program to learn about data types & various arithmetic/bitwise/logical/unary operators |
| 5 | Program to understand loops and conditions |
| 6 | Program to generate patterns and series like Fibonacci/Prime/Even/Odd etc. |
| 7 | Program to understand Classes & Objects |
| 8 | Program to understand Inheritance and its concepts |
| 9 | Program to understand Constructor overloading & calling super class constructor |
| 10 | Program to understand method overloading and overriding |
| 11 | Program to understand the importance of Getters and Setters |
| 12 | Program to understand various access modifiers |
| 13 | Program to understand various access modifiers Program to understand various types of comments in Java |
| 14 | Program to understand Interfaces, Abstract class, Inner Class |
| 15 | Program to understand Final Classes and Methods |
| 16 | Program to learn String, StringBuffer, StringBuilder classes |
| 17 | Program to BigInteger and BigDecimal classes |
| 18 | Program to understand Arrays & do matrix problems |
| 19 | Program to understand raw and generic ArrayList, Auto boxing and Unboxing |
| 20 | Program to understand concepts like Array of Objects & ArrayList of Objects |
| 21 | Program to sort/sorting algorithms |
| 22 | Program to understand methods available in Math class |
| 23 | Program to understand the Cosmic superclass "Object" |
| 24 | Program to understand the concept of Object Cloning |
| 25 | Program to compare objects using Comparable |
| 26 | Program to understand Collections(HashMap, HashTable, Set, TreeSet etc.) & Iterators |
| 27 | Program to understand try-catch-finally block in Exception Handling |
| 28 | Program to understand throw and throws keywords, checked and unchecked Exceptions |
| 29 | Program to create user defined exceptions |
| 30 | Program to understand Multithreading using Thread class and Runnable Interface |
| 31 | Program to understand Thread Synchronization |
| 32 | Program the classical Problems of Thread Synchronization like Dining Philosophers, Producer- Consumer |
| 33 | Program to learn about various (byte/character etc.) streams in Java |
| 34 | Program to learn about File I/O |
| 35 | Program to Create GUI frames using Swing/AWT and Event Handling |
| 36 | Program to understand various layout managers, |
| 37 | Program to understand the Adapter classes, |
| 38 | Program to connect to database and perform operations like Create Table, Update Table, Select |
| 20 | query, Insert query Program to learn about basic Applet concepts |
| 39 | Program to learn about basic Applet concepts Program to strengthen logic building in students using simple/medium level problems from |
| 40 | CodeChef etc. |

: 3-0-0 =3 L-T-P/S=Credits

Course Category : Departmental Core course

Pre-requisite Courses (if any) Equal Course Code (if any) Equivalent Course Code (if any)

Detailed Syllabus

Unit 1:

- 1. Brief Introduction to Machine Learning
- Supervised Learning
- 3. Unsupervised Learning
- 4. Reinforcement Learning

Unit 2:

- 1. Probability Basics
- Linear Algebra
 Statistical Deci Statistical Decision Theory - Regression & Classification
- 4. Bias Variance
- 5. Linear Regression
- 6. Multivariate Regression

Unit 3: Dimensionality Reduction

- 1. Subset Selection, Shrinkage Methods, Principle Components Regression
- 2. Linear Classification, Logistic Regression, Linear Discriminant Analysis
- 3. Optimization, Classification-Separating Hyperplanes Classification

Unit 4:

- 1. Artificial Neural Networks (Early models, Back Propagation, Initialization, Training & Validation)
- 2. Parameter Estimation (Maximum Likelihood Estimation, Bayesian Parameter Estimation)
- 3.
- 4. Evaluation Measures, Hypothesis Testing
- 5. Ensemble Methods, Graphical Models

Unit 5:

- 1. Clustering, Gaussian Mixture Models, Spectral Clustering
- 2. Ensemble Methods
- 3. Learning Theory, Reinforcement Learning

Detailed Syllabus

Unit I: Introduction

The role of Software, Software Characteristics, Industrial strength software, Classification of software products, Legacy Software, Software Engineering Challenges, Software Development Life Cycle.

Unit II: Software Process

Software Development Process Models: Waterfall, Prototyping, Iterative, Spiral. Comparison of Models, Project Management Process, Inspection Process, Software Configuration management Process, Requirements Change management Process, Agile Process.

Unit III: Feasibility Study, Requirements Engineering & Analysis Modeling

Feasibility study: Technical, Economic & Behavioral; Data Gathering: Sources of Data, Observation, Interviewing, Questioners, On-site Observation, Software Process & Characteristics, Software Requirements, Problem Analysis: Data Flow Modeling, Object Oriented Modeling, Prototyping, Cost Benefit Analysis, SRS, Developing Use Cases. Validation & Metrics

Unit IV: Planning Software Projects

Effort Estimation: Constructive Cost Model (COCOMO), Project Scheduling, SCM planning, Quality Planning, Risk Management, Project Monitoring Planning

Unit V: Design Engineering

Design Concepts & Principles, Cohesion, Coupling, Design Methodology, Introduction to Unified Modeling Language (UML), Verification, Metrics

Unit VI: Coding & Testing

Programming principles, Coding Conventions, Coding process, Refactoring, Verification, Coding Metrics, Test Cases, Test Plan, White box & Black box testing, Unit Testing, Integration Testing, Validation Testing: Alpha & Beta Testing, System Testing, Debugging, Testing Metrics

Unit VII: Reliability, Quality & Maintenance

Software Reliability & Metrics, ISO 9000 Standard, Capability Maturity Model, CASE Tools, User Training, Software Maintenance

Course Title : Digital Image Processing

L-T-P/S=Credits : 3-0-0 = 3

Course Category : Departmental Core course

Pre-requisite Courses (if any) : Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

Unit-1 Introduction and Digital Image Fundamentals

Application of Image Processing, Image Processing definition, steps in image Processing, Image Sensing and Acquisition, Image Sampling and Quantization, Spatial and Intensity resolution-Effect of reducing spatial resolution, DPI, Effect of reducing image gray levels. Basic relationships between pixels and adjacency

Unit-2 Intensity Transformation and Spatial Filtering

Basics of intensity transformation and spatial filtering, intensity transformation functions- image negative, log transformation, power law; Piecewise-linear transformation functions- contrast stretching, intensity level slicing, bit plane slicing; Histogram Processing-histogram stretching, histogram equalization, Spatial Filtering, Spatial Correlation and Convolution, Smoothing Spatial Filters, order statistic filters, Sharpening Spatial Filters-The Laplacian, The Gradient-Robert cross gradient operator, Sobel operators

Unit-3 Image Restoration

Model of the image degradation/restoration process, Noise Models, Periodic Noise, Estimation of noise parameters, Restoration in the presence of noise-spatial filtering- Mean filters, Order-statistics filters, Median filter, Max and Min filters, Mid-point filter, Alpha-trimmed mean filter, adaptive filters.

Unit-4 Color Image Processing

Introduction to the color image processing, color models: RGB, HSI, CMY/ CMYK; Conversion of color models: converting colors from RGB to HSI, HSI to RGB, RGB to CMY and CMY to RGB etc. Pseudo coloring of images.

Unit-5 Image Compression

Introduction to image compression, need of compression, methods of image compression: coding redundancy, spatial and temporal redundancy, irrelevant information, models of image compression, Huffman coding, Arithmetic coding, LZW coding, run-length coding, block transform coding, JPEG compression, predictive coding

Unit-6 Image Segmentation

Fundamental, Point, Line and Edge detection, edge linking and boundary detection, Hough transform, thresholding, region-based segmentation, region splitting and merging

Detailed Syllabus

History and Evolution of Software Defined Networking (SDN): Separation of Control Plane and Data Plane, IETF Forces, Active Networking.

Control and Data Plane Separation: Concepts, Advantages and Disadvantages, the OpenFlow protocol.

Network Virtualization: Concepts, Applications, Existing Network Virtualization Framework (VMWare and others), Mininet based examples.

Control Plane: Overview, Existing SDN Controllers including Floodlight and OpenDaylight projects.

Customization of Control Plane: Switching and Firewall Implementation using SDN Concepts.

Data Plane: Software-based and Hadrware-based; Programmable Network Hardware.

Programming SDNs: Northbound Application Programming Interface, Current Languages and Tools, Composition of SDNs.

Network Functions Virtualization (NFV) and Software Defined Networks: Concepts, Implementation and

Data Center Networks: Packet, Optical and Wireless Architectures, Network Topologies.

Use Cases of SDNs: Data Centers, Internet Exchange Points, Backbone Networks, Home Networks, Traffic Engineering.

Programming Assignments for implementing some of the theoretical concepts listed above

Course Outcome

| Sr | Course Outcome | CO |
|----|--|-----|
| 1 | Understand the fundamentals of SDN | CO1 |
| 2 | Understand the characteristics of SDN controllers and their implications | CO2 |
| 3 | Apply SDN programming tools and approaches for programming of SDN | CO3 |
| 4 | Understand the key SDN applications, security of SDN and Network Function Virtualization (NFV) | CO4 |
| 5 | Understand the design and implementation techniques for SDN. | CO5 |

Course Code : CSL DE303 **Course Title** : Storage Networks

L-T-P/S=Credits : 3-1-0 = 4

Course Category : Departmental Elective course Pre-requisite Courses (if any) **Equal Course Code (if any)**

Equivalent Course Code (if any)

Detailed Syllabus

UNIT 1: Introduction to Storage Technology

Data proliferation and the varying value of data with time & usage, Sources of data and states of data creation, Data center requirements and evolution to accommodate storage needs, Overview of basic storage management skills and activities, The five pillars of technology, Overview of storage infrastructure components, Evolution of storage, Information Lifecycle Management concept, Data categorization within an enterprise, Storage and Regulations

UNIT-II: Storage Systems Architecture

Intelligent disk subsystems overview, Contrast of integrated vs. modular arrays, Component architecture of intelligent disk subsystems, Disk physical structure- components, properties, performance, and specifications, Logical partitioning of disks, RAID & parity algorithms, hot sparing, Physical vs. logical disk organization, protection, and back end management, Array caching properties and algorithms, Front end connectivity and queuing properties, Front end to host storage provisioning, mapping, and operation, Interaction of file systems with storage, Storage system connectivity protocols

UNIT-III:Introduction to Networked Storage

JBOD, DAS, SAN, NAS, & CAS evolution, Direct Attached Storage (DAS) environments: elements, connectivity, & management, Storage Area Networks (SAN): elements & connectivity, Fibre Channel principales, standards, & network management principles, SAN management principles, Network Attached Storage (NAS): elements, connectivity options, connectivity protocols (NFS, CIFS, ftp), & management principles, IP SAN elements, standards (iSCSI, FCIP, iFCP), connectivity principles, security, and management principles, Content Addressable Storage (CAS): elements, connectivity options, standards, and management principles, Hybrid Storage solutions overview including technologies like virtualization & appliances.

UNIT-IV:Introduction to Information Availability

Business Continuity and Disaster Recovery Basics, Local business continuity techniques, Remote business continuity techniques, Disaster Recovery principles & techniques

UNIT-V: Managing & Monitoring

Management philosophies (holistic vs. system & component), Industry management standards (SNMP, SMI-S, CIM), Standard framework applications, Key management metrics (thresholds, availability, capacity, security, performance), Metric analysis methodologies & trend analysis, Reactive and pro-active management best practices, Provisioning & configuration change planning, Problem reporting, prioritization, and handling techniques, Management tools overview

UNIT-VI:Security & Virtualization

Storage Security (Importance of Information security, elements and attributes of security), Developing a storage security model (Restricting Access Path, Vulnerability Management, Understanding Vulnerabilities), Securing Data Storage (Storage Security domains, Risk assessment Methodology, Security elements, threats against applications, Controlling user access to data, threats again backup, recovery and archive) Virtualization (Define virtualization, types of virtualization), Storage Virtualization (Storage functionality, Virtual storage, Comparison of virtualization architectures, challenges of storage virtualization), Block level virtualization, File level virtualization.

Suggested Books:

| Sr. | Name of Book, Author, Publisher | Year of Publication / Reprint |

| 1 | Robert Spalding: "Storage Networks the Complete Reference", Tata McGraw-Hill, 2011. | |
| 2 | Marc Farley: Storage Networking Fundamentals – An Introduction to Storage Devices, Subsystems, Applications, Management, and File Systems, Cisco Press, 2005. | |
| 3 | Richard Barker and Paul Massiglia: "Storage Area Network Essentials "A Complete Guide to understanding and Implementing SANs", Wiley India, 2006. | |
| 4 | Information Storage and Management by EMC Corporation. | |

Course Outcome

| Sr | Course Outcome | CO |
|----|---|-----|
| 1 | To Learn about the data generation sources and identification of Storage devices | CO1 |
| 2 | To learn about different storage devices like NAS, DAS, SAN and CAS | CO2 |
| 2 | To help business organizations to identify their storage requirements, I/O's and security | CO3 |
| 3 | of data | |
| 4 | To understand the need of Virtualization and ILM | CO4 |

Course Code : CSE DE307

Course Title : Web Programming using JavaScript

L-T-P/S=Credits : 3-0-2 =4

Course Category : Departmental Elective course

Pre-requisite Courses (if any) : Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

UNIT 1: Introduction to HTML5

Base HTML tags, Paragraph tags, Break tags, Header tags, Bold, Italic tags, Ordered Lists, Unordered List, hyperlinks, table, iFrame, Form, Text fields, Text areas, Radio Buttons, Comments in code, Data Input, Meta tags, Images, Anchor elements, Introduction to hosting Websites

UNIT 2: CSS3 & Front-end development Frameworks:

CSS selectors, properties, attributes, ID, Class, Element, Internal Style sheet, External Style Sheet, Inline Styles, Box model, CSS colors, fonts, background images, Styling Links and ID, Introduction to Front-end 42

frameworks and Libraries: React, Angular, Vue.js, Bootstrap

UNIT 3: JavaScript

Introduction to Javascript: data types, variables, alerts, naming conventions, Strings, Arithmetic, modulo operator, comparison operators, increment and decrement, functions, control statements, switch statements, Arrays, Introduction to Document Object Model, Adding Javascript to websites, Selecting HTML elements with Javascript, Manipulating and changing styles of HTML elements with Javascript, Javascript objects, event handling and responding to events

UNIT 4: Back-end development, APIs, DBMS, Deployment, Security

Introduction to server-side programming languages: Node.js, Express.js, Django. Handling Requests, and Responses: the GET Request, Responding to requests, POST requests, JSON parsing, AJAX basics, Rendering Website, Version control using Git/Github, CRUD operations on the database MySQL/Mongo, Deploying web app, API paths, parameters, Introduction to creating RESTful APIs and Web Services, Security considerations in web development: Authentication, Authorization, Introduction to Continuous Integration and Continuous Deployment tools.

Suggested Books:

| Sr. | Name of Book, Author, Publisher | Year of Publication / Reprint |

| | Most-used Programming Language | |

Course Outcome

| Sr | Course Outcome | СО |
|----|--|-----|
| 1 | Ability to apply HTML5 to create well-structured web pages | CO1 |
| 2 | Ability to use CSS3 to style web pages | CO2 |
| 3 | Ability to implement JavaScript Functionality | CO3 |
| 4 | Ability to develop backend solutions | CO4 |
| 5 | Abiltiy to deploy web applications | CO5 |

Course Code : CSL DE309

Course Title : Block Chain Technology

L-T-P/S=Credits : 3-1-0 =4

Course Category : Departmental Elective course

Pre-requisite Courses (if any) :
Equal Course Code (if any) :
Equivalent Course Code (if any) :

Detailed Syllabus

Unit 1

Introduction to Bit coin, Basic concepts about: Transactions, Transaction Blocks, Blockchain, Mining, Bitcoin Addresses, Wallet technology, Transaction inputs and outputs, Transaction Script, Digital Signature, Advanced Concepts in Transactions and scripting.

Unit 2

The Bit coin Network: Peer to Peer Network Architecture, Full Nodes and SPV Nodes, Encryption and authentication in connections, Transactions Pool, Structure of Block, Block Header, Block Header Hash and Height, Genesis Block, Markle Trees, Linking Blocks in chains.

Unit 3

Mining and Decentralized consensus, Aggregating Transactions in Blocks, Mining the Block, Validating Block, Mining and the Hashing Race, Consensus Attacks, Bit coin Security principles and best practices, Block Chain Applications.

Unit 4

Introduction to Hyper ledger-Fabric/Ethereum for building distributed ledgers (blockchain), Smart contracts, decentralized blockchain applications.

Suggested Books:

| Sr. | Name of Book, Author, Publisher | Year of Publication / Reprint |
|------|--|-------------------------------------|
| Text | : Books | |
| 1 | Mastering Bitcoin – Programming the Open Blockchain, 2 nd Edition by Andreas M Antonopoulos, O'Reilly Publications | |

Course Outcome

| Sr | Course Outcome | СО |
|----|--|-----|
| 1 | Know the Basic concepts, Design, Architecture, Mining, Network and Security aspects of a | CO1 |
| 1 | Block chain & Crypto currency. | |
| 2 | Know the basics of the languages used in building Block chain & Smart Contracts. | CO2 |
| 2 | Understand the application of Block chain in various other domains like Smart Contracts, | CO3 |
| 3 | IoT, Business Process Management etc. | |

Course Code : CSL DE302
Course Title : Cloud Computing
L-T-P/S=Credits : 3-1-0 =4

Course Category : Departmental Elective course

Pre-requisite Courses (if any) : Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

Unit I: Cloud Computing Fundamental: Cloud Computing definition, private, public and hybrid cloud. Cloud types; IaaS, PaaS, SaaS. Benefits and challenges of cloud computing, public vs private clouds, role of virtualization in enabling the cloud; Business Agility: Benefits and challenges to Cloud architecture. Application availability, performance, security and disaster recovery; next generation Cloud Applications.

Unit II: Cloud Applications: Technologies and the processes required when deploying web services; Deploying a web service from inside and outside a cloud architecture, advantages and disadvantages

Unit III: Cloud Services Management: Reliability, availability and security of services deployed from the cloud. Performance and scalability of services, tools and technologies used to manage cloud services deployment; Cloud Economics: Cloud Computing infrastructures available for implementing cloud based services. Economics of choosing a Cloud platform for an organization, based on application requirements, economic constraints and business needs (e.g Amazon, Microsoft and Google, Salesforce.com, Ubuntu and Redhat)

Unit IV: Application Development: Service creation environments to develop cloud based applications. Development environments for service development; Amazon, Azure, Google App.

Suggested Books:

| Sr. | Name of Book, Author, Publisher | Year of Publication / Reprint |

| 3 | Dimitris N. Chorafas, Cloud Computing Strategies [ISBN: 1439834539] | |

| Sr | Course Outcome | СО |
|----|---|-----|
| 1 | Understand the architecture and different types of clouds | CO1 |
| 2 | Case studies of different cloud servers | CO2 |
| 3 | Understanding popular cloud platforms and creating virtual machines | CO3 |

Course Code : CSL DE325

Course Title : Advanced Computer Architecture

L-T-P/S=Credits : 3-1-0 =4

Course Category : Departmental Elective course

Pre-requisite Courses (if any) : Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

Unit-I: Overview of Parallel Processing and Pipelining Processing, study and comparison of uni-processors and parallel processors. Conventional and EPIC architecture. Evolution of parallel processors, future trends and there architecture. Overview of Parallel Processing and Pipelining Processing Necessity of high performance, Constraints of conventional architecture, Parallelism in uni-processor system, Evolution of parallel processors, future trends, Architectural Classification, Applications of parallel processing, Instruction level Parallelism and Thread Level Parallelism, Explicitly Parallel Instruction Computing (EPIC) Architecture, Case study of Intel Itanium Processor. Principles of scalable performance: Performance Metrics and Measures, Speedup Performance Laws. Programming aspects for Intel Itanium Processor

Unit-II: Principles and implementation of Pipelining, Classification of pipelining processors, Pipeline Architecture, Study and comparison of processors with and without pipelining. General pipelining reservation table, Design aspect of Arithmetic and Instruction pipelining, Pipelining hazards and resolving techniques, Data buffering techniques, Job sequencing and Collision, Advanced pipelining techniques, loop unrolling techniques, out of order execution, software scheduling, trace scheduling, Predicated execution, Speculative loading, Register Stack Engine, Software pipelining, VLIW (Very Long Instruction Word) processor, Case study: Super scalar Architecture- Pentium, Ultra SPARC. Super scalar architecture of Pentium, Ultra SPARC, Advances in pipeline architectures. Implementation issues of a program on any pipelined processor their analysis.

Unit-III: Study and comparison of Vector and array processors, Vector and Array Processor, Basic vector architecture, Issues in Vector Processing, Vector performance modeling, vectorizers and optimizers, Case study: Cray Arch. SIMD Computer Organization Masking and Data network mechanism, Inter PE Communication, Interconnection networks of SIMD, Static Vs Dynamic network, cube hyper cube and Mesh Interconnection network. Parallel Algorithms For Array Processors: Matrix Multiplication. Sorting, SIMD computer organization. Implementation issues of Matrix multiplication and sorting on array processor and their analysis.

Unit-IV: Microprocessor Architectures, study and comparison of Loosely and Tightly coupled multiprocessors. Loosely and Tightly coupled multiprocessors, Processor characteristics of multiprocessors, Inter Processor communication network, Time shared bus, Crossbar switch, Multiport Memory Model, Memory contention and arbitration techniques, Cache coherency and bus snooping, Massively Parallel Processors (MPP), Cow's and NOW's Cluster and Network of Work Stations), Chip Multiprocessing (CMP), Case Study of IBM Power4 Processor Inter Processor Communication and Synchronization, Implementation issues of a program on multiprocessor system.

Unit-V: Study of Architecture of Multithreaded processors, Latency hiding techniques, Principles of multithreading, Issues and solutions. Parallel Programming Techniques: Message passing program development, Synchronous and asynchronous message passing, Message passing parallel programming, Shared Memory Programming, Data Parallel Programming. Implementation issues of a multithreaded program.

Unit-VI: Parallel software issues, study of parallel programming concepts. a)Parallel algorithms for multiprocessors, classification of parallel algorithms, performance of parallel algorithms b) Operating systems for multiprocessors systems, Message passing libraries for parallel programming interface, PVM (in distributed memory system), Message Passing Interfaces (MPI), Threads (in shared memory system) c) Parallel Programming Languages: Fortran 90, Occam, C-Linda, CCC etc. d) Issues towards cluster computing. Introduction to Neuro Computing and Grid Computing:

Suggested Books:

| Sr. | Name of Book, Author, Publisher | Year of Publication / Reprint |

| 4 | Richard Y. Kain, Advanced Computer Architecture | | |
| 5 | http://www.intel.com/products/processor (for Intel Itanium Processor) | | |

Course Outcome

| Sr | Course Outcome | СО |
|----|---|-----|
| 1 | Understand the Concept of Parallel Processing and its applications | CO1 |
| 2 | Implement the Hardware for Arithmetic Operations | CO2 |
| 3 | Analyze the performance of different scalar Computers | CO3 |
| 4 | Develop the Pipelining Concept for a given set of Instructions | CO4 |
| 5 | Distinguish the performance of pipelining and non pipelining environment in a processor | CO5 |

Course Code : CSL DE323

Course Title : Computer Network Security

L-T-P/S=Credits : 3-0-2 = 4

Course Category : Departmental Elective course

Pre-requisite Courses (if any) : Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

UNIT 1

Introduction to cryptography and network security, Networks OSI Model of networking layers, Importance of Security in networks, types on internetwork, attacks, security services pervasive security mechanism.

UNIT 2

Foundation of Modern Cryptography, private key cryptography, DES, TDEA, Block Ciphers, linear cryptanalysis, differential cryptanalysis, AES public key Cryptography, DH algorithm, Algorithms for discrete algorithms birth day paradox, pollard's p algorithm for discrete algorithm, EI Gomel public key, RSA, Elliptic curve cryptography, stream chippers

UNIT 3

Hashing Authentication & Signature Schemes Hashing schemes SHA- Family, MAC, Digital Signature RSA EI Gamel, DSS DSA Authentication Protocols, applications Kereberos X.509 Directory Services, E-mail security, Email architecture SSL PGP, MIME, S/MIME Internet Protocol Security (IPSec) IPSec architecture, IPSec verses other layers security, Mobile IPsec VPN Web Security, SSI, TLS, SETetc

UNIT 4

System Security Intruders, Types of Attacks, Protecting against Intruders, Honeypots, Scanning and analysis tools, Viruses and Worms, Types of Viruses, Protection, Firewall architecture implementing firewalls, XML firewalls, Trusted systems, Trusted system security implementation, wireless security.

Suggested Books:

| Sr. | Name of Book, Author, Publisher | Year of Publication / Reprint |
|------------|--|-------------------------------|
| Text Books | | |
| 1 | Cryptography and Network Security: Behrouz A. Forauzan 2/e | |
| 2 | Cryptography and Network Security: William Stallings 4/e | |
| 3 | Cryptography and Network Security: AtulKahate 2/e | |

| Sr | Course Outcome | СО |
|----|---|-----|
| 1 | Identify factors driving the need for network security | CO1 |
| 2 | Identify and classify particular examples of attacks | CO2 |
| 3 | Define the terms vulnerability, threat and attack | CO3 |
| 4 | Identify physical points of vulnerability in simple networks | CO4 |
| 5 | Compare and contrast symmetric and asymmetric encryption systems and their vulnerability to attack, and the characteristics of hybrid systems | CO5 |

List of Experiments

NOTE: Experiments will be implemented in C/C++/Python.

| Sr | Contents |
|----|---|
| 1 | Installation of Virtual Machine and Linux OS. |
| 2 | Practicing various network troubleshooting commands. |
| 3 | Write programs to implement traditional Ciphers. |
| 4 | Write a program to implement DES algorithm. |
| 5 | Write a program to implement 3DES algorithm. |
| 6 | Write a program to implement RSA algorithm. |
| 7 | Write a program to implement AES algorithm. |
| 8 | Write a program to implement message digest. |
| 9 | Installation and Configuration of Wireshark tool. |
| 10 | Analyzing network traffic using Wireshark. |
| 11 | Analyze and investigate network information of packets. |
| 12 | Understanding preliminary digital forensic using Wireshark. |

Course Code : CSL DE302

Course Title : Data mining & warehousing

L-T-P/S=Credits : 3-0-2 =4

Course Category : Departmental Elective course

Pre-requisite Courses (if any) : Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

Module - I

Data Mining: Introduction, Relational Databases, Data Warehouses, Transactional databases, Advanced database Systems and Application, Data Mining Functionalities, Classification of Data Mining Systems, Major Issues in Data Mining.

Module - II

Data Warehouse: Introduction, A Multidimensional data Model, Data Warehouse Architecture, Data Warehouse Implementation, Data Cube Technology, From Data warehousing to Data Mining.

Module - III

Data Processing: Data Cleaning, Data Integration and Transformation, Data Reduction, Discretization and concept Hierarchy Generation. Data Mining Primitives, Languages and System Architecture: Data Mining Primities, DMQL, Architectures of Data Mining Systems.

Module - IV

Concept Description: Data Generalization & Summarization – Based Characterization, Analytical Characterization, Mining class Comparisons, Mining Descriptive Statistical Measures in Large Databases.

Module - V

Mining Association Rules in Large Databases: Association Rule Mining, Single – Dimensional Boolean Association Rules, Multilevel Association Rules from Transaction Databases, Multi Dimensional Association Rules from Relational Databases, From Association Mining to Correlation Analysis, Constraint – Based Association Mining

Module - VI

Classification and Prediction: Classification & Prediction, Issues Regarding Classification & Prediction, Classification by decision Tree Induction, Bayesian Classification, Classification by Back propagation, Classification based on concepts & Association Rule, Other Classification, Prediction, Classification Accuracy.

Module - VII

Cluster Analysis : Types of Data in Cluster Analysis, Partitioning methods, Hierarchical methods, Density – Based Methods, Grid – Based Methods, Model – Based Clustering Methods, Outlier Analysis.

Mining Complex Types of Data.

| | | |

Course Outcome

| Sr | Course Outcome | СО |
|----|---|-----|
| 1 | To understand data warehouse concepts, architecture, business analysis and tools | CO1 |
| 2 | To understand data pre-processing and data visualization techniques | CO2 |
| 3 | To study algorithms for finding hidden and interesting patterns in data | CO3 |
| 4 | To understand and apply various classification and clustering techniques using tools. | CO4 |

Course Code : CSL DE304

Course Title : Human Computer Interaction

L-T-P/S=Credits : 3-1-0 =4

Course Category : Departmental Elective course

Pre-requisite Courses (if any) :
Equal Course Code (if any) :
Equivalent Course Code (if any) :

Detailed Syllabus

Introduction: Course objective and overview, Historical evolution of the field ofHuman Computer Interaction (HCI)

Interactive system design: Concept of usability - definition and elaboration, HCI and software engineering, GUI design and aesthetics, Prototyping techniques.

Model-based Design and evaluation: Basic idea, introduction to different types of models, GOMS family of models (KLM and CMN-GOMS), Fitts' law and HickHyman's law, Model-based design case studies.

Guidelines in HCI: Shneiderman's eight golden rules, Norman's seven principles, Norman's model of interaction, Nielsen's ten heuristics with example of its use, Heuristic evaluation, Contextual inquiry, Cognitive walkthrough.

Empirical research methods in HCI: Introduction (motivation, issues, research question formulation techniques), Experiment design and data analysis (with explanation of one-way ANOVA)

Task modeling and analysis: Hierarchical task analysis (HTA), Engineering task models and Concur Task Tree (CTT).

Dialog Design: Introduction to formalism in dialog design, design using FSM (finite state machines), State charts and (classical) Petri Nets in dialog design.

Cognitive architecture: Introduction to CA, CA types,relevance of CA in IS design, Model Human Processor (MHP)

Object Oriented Programming: OOP- Introduction, OOM- Object Oriented Modeling of User Interface Design **Design -Case Studies:** Case Study 1- MultiKey press Hindi Text Input Method on a Mobile Phone, Case Study 2 - GUI design for a mobile phone based Matrimonial application, Case Study 3 - Employment Information System for unorganised construction workers on a Mobile Phone

Course Title : Quantum Computing

L-T-P/S=Credits : 3-0-2 =4

Course Category : Departmental Elective course

Pre-requisite Courses (if any) :
Equal Course Code (if any) :
Equivalent Course Code (if any) :

Detailed Syllabus

1. Introduction to Quantum Computing

(6 Hours)

- 1.1 Motivation for studying Quantum Computing
- 1.2 Major players in the industry (IBM, Microsoft, Rigetti, D-Wave etc.)
- 1.3 Origin of Quantum Computing
- 1.4 Overview of major concepts in Quantum Computing
 - •Qubits and multi-qubits states, Bra-ket notation.
 - Bloch Sphere representation
 - Quantum Superposition
 - Quantum Entanglement

2. Math Foundation for Quantum Computing

(9 Hours)

2.1 Matrix Algebra: basis vectors and orthogonality, inner product and Hilbert spaces, matrices and tensors, unitary operators and projectors, Dirac notation, Eigen values and Eigen vectors.

3. Building Blocks for Quantum Program

(8 Hours)

- 3.1 Architecture of a Quantum Computing platform
- 3.2 Details of q-bit system of information representation:
 - Block Sphere
 - Multi-qubits States
 - Quantum superposition of gubits (valid and invalid superposition)
 - Quantum Entanglement
 - Useful states from quantum algorithmic perceptive e.g. Bell State
 - Operation on qubits: Measuring and transforming using gates.
 - Quantum Logic gates and Circuit: Pauli, Hadamard, phase shift, controlled gates, Ising, Deutsch, swap etc.
- 3.3 Programming model for a Quantum Computing Program
 - Steps performed on classical computer
 - Steps performed on Quantum Computer
 - Moving data between bits and qubits.

4. Quantum Algorithms

(22 Hours)

- 4.1 Basic techniques exploited by quantum algorithms.
 - Amplitude amplification
 - Quantum Fourier Transform
 - Phase Kick-back
 - Quantum Phase estimation
 - Quantum Walks
- 4.2 Major Algorithms
 - Shor's Algorithm
 - Grover's Algorithm
 - Deutsch's Algorithm
 - Deutsch -Jozsa Algorithm 4.3 OSS Toolkits for implementing Quantum program
 - IBM quantum experience
 - Microsoft Q
 - •RigettiPyQuil (QPU/QVM)

LIST OF PRACTICALS

- 1. Building Quantum dice
- 2. Building Quantum Random No. Generation
- 3. Composing simple quantum circuits with q-gates and measuring the output into classical bits.
- 4. Implementation of Shor's Algorithms
- 5. Implementation of Grover's Algorithm
- 6. Implementation of Deutsch's Algorithm
- 7. Implementation of Deutsch-Jozsa's Algorithm
- 8. Mini Project such as implementing an API for efficient search using Grover's Algorithms or Integer factorization using Shor's Algorithm

Course Code : CSL DE308

Course Title : Mobile & App Development

L-T-P/S=Credits : 3-1-0 =4

Course Category : Departmental Elective course

Pre-requisite Courses (if any) : Yes (Basic understanding of programming preferably in

languages like: Java, Python, or JavaScript)

Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

Unit-1 Overview & Design

Overview of mobile platforms (iOS, Android), Introduction to mobile development frameworks, the mobile development lifecycle, UI/UX design & Tools (Sketch, Adobe XD, Figma)

Unit-II Mobile Development Fundamentals

Introduction to programming languages for mobile development, Overview of development environments (Android Studio, Xcode), Building basic UI components and layouts

Unit-III Mobile App Development Frameworks

Introduction to cross-platform development frameworks (React Native, Flutter), Building cross-platform applications, Pros and cons of cross-platform development

Unit-IV Advanced Mobile Development Concepts

Incorporating device features (camera, GPS, sensors) into mobile apps, Data storage and management on mobile devices, Implementing authentication and authorization in mobile apps

Unit-V Test, Deployment & Optimization

Testing methodologies for mobile Applications, Deployment process for iOS and Android platforms, Performance optimization techniques for mobile applications

| 2 | iOS Programming: The Big Nerd Ranch Guide" , 7 th Edition by Christian Keur and Aaron Hillegass | |

| Sr | Course Outcome | СО |
|----|---|-----|
| 1 | Understand the fundamental concepts of mobile application development. | CO1 |
| 2 | Design and implement user interfaces for mobile applications. | CO2 |
| 3 | Utilize development frameworks and tools for mobile app development. | CO3 |
| 4 | Apply best practices for optimizing performance and user experience in mobile applications. Test and debug mobile applications effectively. | CO4 |
| 5 | Demonstrate proficiency in integrating various features such as sensors, location services, and multimedia in mobile applications. | CO5 |

Course Code : CSL DF310 **Course Title** : Internet of Things

L-T-P/S=Credits : 3-0-2 =4

Course Category : Departmental Elective course

Pre-requisite Courses (if any) **Equal Course Code (if any) Equivalent Course Code (if any)**

Detailed Syllabus

Unit I: Introduction

What is the Internet of Things?: History of IoT, About IoT, Overview and Motivations, Examples of Applications, Internet of Things Definitions and Frameworks :IoT Definitions, IoT Architecture, General Observations, ITU-T Views, Working Definition, IoT Frameworks, Basic Nodal Capabilities

Unit II: Fundamental IOT Mechanisms and Key TechnologiesIdentification of IoT Objects and Services, Structural Aspects of the IoT, Environment haracteristics, Traffic Characteristics, Scalability, Interoperability, Security and Privacy, Open Architecture, Key IoT Technologies, Device Intelligence, Communication Capabilities, Mobility Support, Device Power, Sensor Technology, RFID Technology, Satellite Technology

Unit III: Radio Frequency Identification Technology

RFID: Introduction, Principle of RFID, Components of an RFID system, Issues

EPCGlobal Architecture Framework: EPCIS & ONS, Design issues, Technological challenges, Security challenges, IP for IoT, Web of Things.

Wireless Sensor Networks: History and context, WSN Architecture, the node, Connecting nodes, Networking Nodes, Securing Communication

WSN specific IoT applications, challenges: Security, QoS, Configuration, Various integration approaches, Data link layer protocols, routing protocols and infrastructure establishment.

Unit IV: Resource Management in The Internet Of Things

Clustering, Software Agents, Clustering Principles in an Internet of ThingsArchitecture, Design Guidelines, and Software Agents for Object Representation, Data Synchronization.

Identity portrayal, Identity management, various identity management models: Local, Network, Federated and global web identity, user-centric identity management, device centric identity management and hybrid-identity management, Identity and trust.

Unit V: Internet of Things Privacy, Security and Governance

Vulnerabilities of IoT, Security requirements, Threat analysis, Use cases and misuse cases, IoT security tomography and layered attacker model, Identity establishment, Access control, Message integrity, Non repudiation and availability, Security model for IoT.

Unit VI: Business Models For The Internet Of Things

Business Models and Business Model Innovation, Value Creation in the Internet of Things, Business Model Scenarios for the Internet of Things.

Unit VII: Internet of Things Application

Smart Metering Advanced Metering Infrastructure, e-Health Body Area Networks, City Automation, Automotive Applications, Home Automation, Smart Cards

L-T-P/S=Credits : 3-0-2 =4

Course Category : Departmental Elective course

Pre-requisite Courses (if any) : Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

Introduction: What is an Ad Hoc Network?, Types of Ad hoc Mobile Communications, Types of Mobile Host Movements, Challenges Facing Ad hoc Mobile Networks, Ad hoc wireless Internet, Issues in Designing a Routing Protocol for Ad Hoc Wireless Networks, Classifications of Routing Protocols: Table–Driven Routing Protocols, Destination Sequenced Distance Vector (DSDV), Wireless Routing Protocol (WRP), Cluster Switch Gateway Routing (CSGR), Source–Initiated On–Demand Approaches, Ad hoc On–Demand Distance Vector Routing (AODV), Dynamic Source Routing (DSR), Temporally Ordered Routing Algorithm (TORA), Signal Stability Routing (SSR), Location–Aided Routing (LAR), Power–Aware Routing (PAR), Zone Routing Protocol (ZRP).

Wireless Sensor Networks: Introduction to Wireless sensor networks, Single-sink single-hop WSN, Single-sink multi-hop WSN, Multi-sink multi-hop WSN, Advantages of ad-hoc/sensor networks, Node and Network Architectures, Wireless Sensor Device Architecture, Network Architectures, Main features of WSANs, Current and future research on WSANs, **Applications of WSNs**

Technologies for WSNs: ZigBee technology, Ultrawide bandwidth technology, Bluetooth technology, Comparison among technologies.WIMAX, 4G technology

Communication protocols for WSNs

MAC protocols and Routing protocols: Issues in designing routing protocols, Classification of routing protocols, Flat routing, Flooding and gossiping, SPIN protocol, Directed diffusion protocol, Rumour routing, Gradient-based routing, Hierarchical routing, LEACH protocol, PEGASIS protocol, TEEN protocol, MECN protocol, SPAN protocol, Location-based routing protocols, Contention-based protocols.

Case Studies: Simulation of a Sensor Network

Course Title : Information Coding Practices

L-T-P/S=Credits : 3-1-0 =4

Course Category : Departmental Elective course

Pre-requisite Courses (if any)
Equal Course Code (if any)
Equivalent Course Code (if any)

Detailed Syllabus

UNIT 1 Mathematical Background and Introduction

Introduction to algebraic structures, Field extensions, Quadratic Residues, Krawtchouk Polynomials, Combinatorial Theory, Probability Theory, Shannon's Theorem, Coding Gain, Problems.

UNIT 2 Linear and Good Codes

Block Codes, Linear codes, Hamming codes, Majority Logic decoding, Weight enumerators, The Lee Metric, Hadamard codes and generalizations, Binary Golay code, The Ternary Golay code, Constructing codes from other codes, Reed-Muller codes, Kerdock codes

UNIT 3 Bounds on Codes and Cyclic Codes

Gilbert bound, Asymptotic Plotkin bound, Griesmer bound, The Linear Programming bound, Cyclic codes, Zeros of a Cyclic codes, The Idmpotent of a cyclic codes, Other representations of a Cyclic codes.

Detailed Syllabus

UNIT 1 Product Specification

(7 Contact Periods)

Hardware / Software partitioning – Detailed hardware and software design –Integration –Product testing Selection Processes, Microprocessor Vs Micro Controller, Performance tools Bench marking RTOS Micro Controller, Performance tools, Bench marking, RTOS availability, Tool chain availability, Other issues in selection processes.

UNIT 2 Partitioning Decision (8 Contact Periods)

Hardware / Software duality – coding Hardware – ASIC revolution Managing the Risk –Co-verification – execution environment – memory organization – System startup –Hardware manipulation – memory mapped access – speed and code density.

Unit 3 Interrupt Service Routines

(7 Contact Periods)

Watch dog timers – Flash Memory basic toolset – Host based debugging – Remote debugging – ROM emulators – Logic analyser – Caches – Computer optimisation – Statistical profiling

<u>Unit 4</u> In Circuit Emulators

(6 Contact Periods)

Buller proof run control – Real time trace – Hardware break points – Overlay memory – Timing constraints – Usage issues – Triggers.

Unit 5 Testing

(6 Contact Periods)

Bug tracking – reduction of risks & costs – Performance – Unit testing – Regression testing – Choosing test cases – Functional tests – Coverage tests – Testing embedded software – Performance testing – Maintenance.

Course Title : Multimedia and Virtual Reality

L-T-P/S=Credits : 3-1-0 =4

Course Category : Departmental Elective course

Pre-requisite Courses (if any) : Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

UNIT 1 Multimedia preliminaries and applications

(9 Contact Periods)

Multimedia preliminaries and applications: Development and use of multimedia packages; introduction to virtual reality and modeling languages. CD-ROM and the Multimedia Highway, Introduction to making multimedia - The Stages of project, the requirements to make good multimedia, Multimedia skills and training, Training opportunities in Multimedia. Motivation for multimedia usage, Frequency domain analysis, Application Domain & ODA etc. Multimedia-Hardware and Software: Multimedia Hardware – Macintosh and Window production Platforms, Hardware peripherals – Connections, Memory and storage devices, Media software – Basic tools, making instant multimedia, Multimedia software and Authoring tools, Production Standards.

UNIT 2 Multimedia building blocks

(7 Contact Periods)

Multimedia – making it work – multimedia building blocks – Text, Sound, Images, Animation and Video, Digitization of Audio and Video objects, Data Compression: Different algorithms concern to text, audio, video and images etc., Working Exposure on Tools like Dream Weaver, 3D Effects, Flash Etc.

UNIT 3 Multimedia and the Internet

(7 Contact Periods)

Multimedia and the Internet: History, Internet working, Connections, Internet Services, The World Wide Web, Tools for the WWW – Web Servers, Web Browsers, Web page makers and editors, Plug-Ins and Delivery Vehicles, HTML, Designing for the WWW – Working on the web, Multimedia Applications – Media Communication, Media Consumption, Media Entertainment, Media games.

UNIT 4 Multimedia-looking towards Future

(6 Contact Periods)

Multimedia-looking towards Future: Digital Communication and New Media, Interactive Television, Digital Broadcasting, Digital Radio, Multimedia Conferencing, Assembling and delivering a project-planning and costing, Designing and Producing, content and talent, Delivering, CD-ROM technology.

Course Code : CSL DE320

Course Title : High Performance Computing

L-T-P/S=Credits : 3-1-0 =4

Course Category : Departmental Elective course

Pre-requisite Courses (if any) :
Equal Course Code (if any) :
Equivalent Course Code (if any) :

Detailed Syllabus

Unit-I:

Sequential model, need of alternative model, parallel computational models such as PRAM, LMCC, Hypercube, Cube Connected Cycle, Butterfly, Perfect Shuffle Computers, Tree model, Pyramid model, Fully Connected model, PRAM-CREW, EREW models, simulation of one model from another one.

Unit-II:

Performance Measures of Parallel Algorithms, speed-up and efficiency of PA, Cost optimality, An example of illustrate Cost-optimal algorithms- such as summation, Min/Max on various models.

Unit-III:

Parallel Sorting Networks, Parallel Merging Algorithms on CREW/EREW/MCC/, Parallel Sorting Networks on CREW/EREW/MCC/, linear array

Unit-IV:

Parallel Searching Algorithm, Kth element, Kth element in X+Y on PRAM, Parallel Matrix Transportation and Multiplication Algorithm on PRAM, MCC, Vector-Matrix Multiplication, Solution of Linear Equation, Root finding.

Unit-V:

Graph Algorithms - Connected Graphs, search and traversal, Combinatorial Algorithms- Permutation, Combinations, Derrangements.

Suggested Books:

Detailed Syllabus

Topic I: What is an algorithm, Newton's method, Formulation for optimization problems, Optimization algorithms, search for optimality, No-free lunch theorem, meta-heuristic algorithms

Topic II: Mathematical foundations: Norms, Eigen values, Eigen vectors, Sequences & Series, Convexity, Computational Complexity, Random Variables & Probability distributions

Unit II: Simulated Annealing

SA: Annealing & Ditzman distributions, SA Parameters, SA Algorithms, Convergence properties, Stochastic tunneling

Diiferential Evolution: Introduction, Diiferential Evolution, Variants, Choice of parameters, Convergence Analysis

Unit III: Particle Swarm Optimization

PSO Algorithm, Accelerated PSO, Implementation, Convergence Analysis, Binary PSO Ant Colony Optimization: Algorithm, Implementation and convergence analysis

Unit IV: Nature Algorithms - I

Firefly Algorithm: Analysis, Implementation, Variants of Firefly algorithm, Applications, Why the Firefly is efficient Cuckoo Search: Cuckoo Breeding behavior, levy flights, cuckoo search, implementation, variants of cuckoo search

Bat Algorithm: Analysis, Implementation, Binary BAT algorithm, Applications, Why the Bat is efficient

Unit V: Nature Algorithms - II

Grey-Wolf Algorithm: Analysis, Implementation, Variants of Grey-Wolf algorithm, Applications, Why the Grey-Wolf is efficient. Whale algorithm: Analysis, Implementation, Variants of Whale algorithm, Applications, Why the Whale is efficient. Flower Pollination algorithm: Implementation, Multi-Objective FP Algorithm, Variants & applications

Course Code : CSL DE403

Course Title : Metaheuristic Design Framework

L-T-P/S=Credits : 3-1-0 =4

Course Category : Departmental Elective course

Pre-requisite Courses (if any) :
Equal Course Code (if any) :
Equivalent Course Code (if any) :

Detailed Syllabus

Unit 1: Introduction. Classes of difficult problems (planning, assignment, selection, adaptation, prediction) and corresponding search spaces. Classes ofmetaheuristics. The overall structure of a metaheuristic algorithm. Trajectory-based Metaheuristics. Deterministic local search (Pattern Search, Nelder Mead). Random local search (Matyas and Solis-Wetsalgorithms). Global search (restarted local search, iterated local search, simulated annealing, tabu search, variable neighbourhood search).

Unit 2: Population-based Metaheuristics. Overall structure. Main components(exploration and exploitation operators). Operators for Discourse, evolutionaryalgorithms (EA): mutation, crossover, selection. Encoding types. Geneticalgorithms, evolution strategies, evolutionary programming.... MemeticAlgorithms, hybridizing EA with local search operators. Swarm Intelligence.Ant colony optimization. Particle swarm optimization. Artificial bee colony.

Unit 3: Swarm Intelligence. Ant colony optimization. Particle swarm optimization. Artificial bee colony. Difference-based and Probabilistic Algorithms. Differential Evolution, Population Based Incremental Learning, Estimation of Distribution Algorithms, Bayesian Optimization Algorithms Scalability of Metaheuristic Algorithms. Cooperative coevolution. Parallel models for population-based metaheuristics (master-slave, island, cellular Multi-objective/ multi-modal/ dynamic optimization. Particularities of multi-objective optimization (non-domination, Pareto front etc). Apriori and aposteriori techniques. Quality metrics. Multi-modal optimization and specific approaches (niching, sharing etc). Techniques for dynamic optimization (hypermutation, random immigrants, ageing mechanisms).

Unit 4: Deep Hybrid Learning Models: Applications of Metaheuristicalgorithms for: neural networks design, data mining, scheduling. Hyperparameter tuning using Grid search. Hybridizing CNN with Particle swarm optimization, K-Nearest Neighbour and L-STM networks.

Reference Books:

Course Title : Cyber Security
L-T-P/S=Credits : 3-1-0 =4

Course Category : Departmental Elective course

Pre-requisite Courses (if any) : Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

Introduction

Terminologies: cyberspace, cybercrime, cyber security, Cyber squatting, cyberpunk, cyber warfare, cyber terorrism, Cyber security needs, Cyber criminals: Introduction, Cybercriminals Groups, Classification of cyber crimes, Cybercrime categories, Cybercrime: The legal perspective

Cyber offenses

Hackers, crackers, phreakers: Introduction, Planning cybercrime, Social engineering Cyberstalking, Cybercafe and cybercrime, Attack vector, Botnets

Cybercrime techniques

Proxy servers and Anonymizers, phishing, Password cracking, Keyloggers and spywares, Virus and worms, Trojan horse and backdoors, Steganography, Dos and DDosattacks, SQL injection, Buffer overflow

Phishing and Identity theft

Phishing: Introduction, Phishing methods: Dragnet, Rod-and-reel, Lobsterpot, Gillnet, Techniques of phishing, Phishing Toolkits and Spy Phishing, Phishing countermeasures, Personally Identifiable Information (PII), Types of Identity theft, Techniques of Identity theft, Identity Theft Countermeasures

Legal Perspective of Cyber security & Forensics fundamentals

Need for cyber laws: The Indian context, Indian IT Act 2000, Changes made in IT Act 2000, Digital signatures and the Indian IT Act, Cybercrime and punishment, Cyberforensics: introduction, types, Needs of cyber forensics, Cyberforensics and digital evidence

Cyber Security: Organization Implications

Search Breach: PI Collecting by Organization, Insiders threats in Organization, PrivacyDimension, Keychallenges in Organization, Cost of cyber crimes and IPR issues, Organizational guidelines for Internet usage, safe computing guidelines and computer usage policy, Forensics best practices for organization

Detailed Syllabus

Unit-1- Introduction to E-commerce

Define E-commerce, Brief history of E-commerce, Forces fueling E-commerce, Challenges to traditional methods, Types of E-commerce, E-Business, E business trident, E-com Vs E-Business.

Unit-2 E-Commerce Challenges and Issues

E-commerce Challenges, E-commerce Issues- Technical issues, Privacy vs Security, Data, Type of data, Protection of data, Security – challenges and requirements, E-commerce players and attacks, Defenses: Firewall, Network security, , Emerging firewall management issues, Types of online transactions, Requirement for online transactions, Securing the Network Transactions – Cryptography – Encryption, Public key encryption vs Private key encryption, Security Protocols for Web Commerce – SSL, SET, SHTTP.

Unit-3 Electronic Payment system.

Overview of E- payment system, Pre, Post and Instant payment methods in e-commerce, Digital cash, Properties, Electronic cheques and benefits, online credit card system, types of credit card payments, secure electronic transactions, Debit cards, E-benefit transfer.

Unit-4 E business Issues and Internet Marketing

E-Business, Organizational issues, Implementation issues, Marketing issues, Model for E business, Internet Marketing, Different stages of internet marketing, Critical success factor of internet marketing, E commerce strategies for development, E-commerce & sales.

Unit -5 Cyber laws

Definition, Need for cyber laws, Jurisprudence of Indian cyber law, Cyber crimes and criminal justice IT ACT2000 objectives, E-governance, digital signature, Sections related to ,Electronic records, Attribution, acknowledgement and dispatch of Electronic Records, security of E-records and digital signature, Controller functions, Certificates, subscriber duties, Penalties and Adjudications, Cyber regulation Appellate tribunal, Offences, Contracts in the InfoTech world, Power of arrest without warrant a critique, IT Act Modifications. Cyber consumer protection.

L-T-P/S=Credits : 3-1-0 =4
Course Category : Departmental Elective course

Pre-requisite Courses (if any) : Equal Course Code (if any) : Equivalent Course Code (if any) :

Detailed Syllabus

UNIT 1: Introduction to Cyber Crime and Ethical Hacking

Introduction of Cybercrime: Types of cybercrime , categories of cybercrime , Computers' roles in crimes, Prevention from Cyber crime, Hackers, Crackers, Phreakers

Ethical Hacking: Difference between Hacking and Ethical hacking: Steps of Ethical Hacking, Exploring some tools for ethical hacking

UNIT 2: Introduction to Digital Forensics and Digital Evidences

Digital Forensic, Rules for Digital Forensic The Need for Digital Forensics, Types of Digital Forensics, Ethics in Digital Forensics, Digital Evidences: Types and characteristics and challenges for Evidence Handling

UNIT 3: Incidence Response Process and Live Data Collection

Introduction, Goals of Incident response, Incident Response Methodology, Formulating Response Strategy IR Process – Initial Response, Activities in Initial Response, Phases after Detection of an Incident Live Data Collection: Live Data collection from UNIX System: Live Data

UNIT 4: Forensic Duplication and Disk Analysis, and Investigation

Forensic Duplication: Forensic Image Formats, Traditional Duplication, Live System Duplication

Disk and File System Analysis: Media Analysis Concepts, Partitioning and Disk Layouts, Special Containers, Hashing, Carving, Forensic Imaging

Data Analysis: Analysis Methodology Investigating UNIX systems , Investigating Applications, Web Browsers, Email, Malware Handling: Static and Dynamic Analysis

UNIT 5: Report and Forensic Tools: Report

Goals of Report, Layout of an Investigative Report, Guidelines for Writing a Report, sample for writing a forensic report.

Computer Forensic Tools: need and types of computer forensic tools, task performed by computer forensic tools. Study of open source Tools like SFIT, Autopsy etc. to acquire, search, analyze and store digital evidence

| 1 | Computer Vision: Algorithms and Applications, Richard Szeliski, Ed. Springer, ISBN-10: 1848829345,ISBN-13: 978- 1848829343, Publishing, 2010. | |
| 2 | Handbook of Robotics, Bruno Siciliano, Ed. Springer-Verlag Berlin and Heidelberg GmbH & Co. K, ISBN-10: 354023957X, ISBN-13: 978-3540239574, Publishing, 2008. | |

| Sr | Course Outcome | CO |
|----|--|-----|
| 1 | To learn about kinematics and dynamics | CO1 |
| 2 | To design controllers for tracking control of a robot | CO2 |
| 3 | To apply computer vision for motion control of robotic systems | CO3 |
